# presentation

Andalusia Basic Data is an annual publication belonging to the Andalusian Institute of Statistics. Its aim is to facilitate the comprehension and analysis of the different facets which shape the economic and social reality of the Autonomous Region.

The edition corresponding to 1999 comprises a set of updated information. It is organized in 17 thematic chapters and arranged in more than 120 tables and graphics. It has been done in an easy to use size and presents an attractive design that makes pleasant its use.

With regards to last edition, it has been increased the statistic information in three main aspects: environment, economy and business network.

In relation to environment, new information has been included about climatic conditions and the evolution in the quality of Andalusian beaches. In the economic field, it has been included the main magnitudes of the supply and the demand in the Andalusian economy. As for the business network, information about its structure and dimension has been provided.

The publication has a strong spreading nature related to the information available about the Andalusian Autonomous Region. Due to this, in order to make easy data interpretation, this edition includes methodological notes about the statistical operations carried out, and information about concepts, used variables, as well as data resources. Besides, at the end of each thematic section users will find references to other sources from which to obtain more information.

Scholars and agents of the economic and social life, and society in general, dispose of a synthesis about the Andalusian most relevant information, which will result useful and valuable in their professional and dayly task.

Magdalena Álvarez Arza  
Counsellor of the Regional Government Department for Economy and Treasure  
President of the Andalusian Statistics Council

# 1

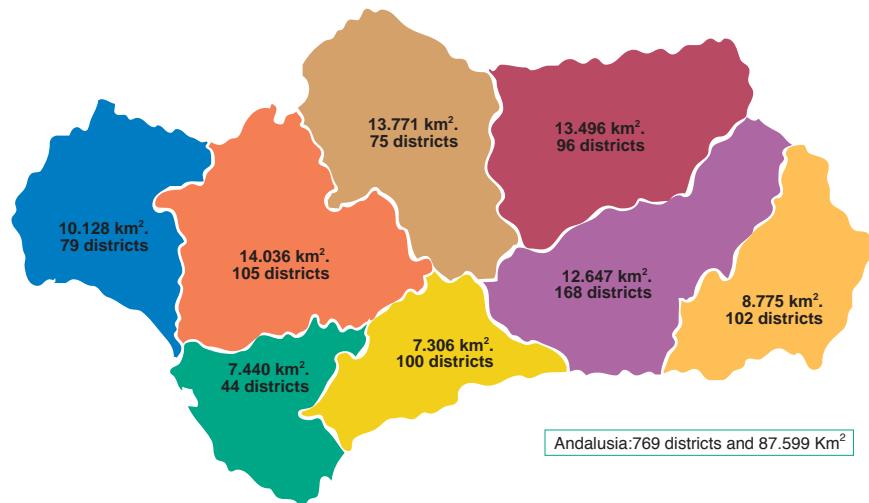

## Territory and environment

The environment condition in urban and natural spaces is a socially relevant field in modern societies. This has provoked a growing demand of information about the environment and its conservation.

This chapter offers a selection of tables. They expose

some aspects related to territory such as the surface area or the land distribution and plant coverage. They also deal with environment, providing data related to the quality and policy of the environmental protection and to the conservation features and conditions.

Surface area and number of districts per province. 1998

Classification of the districts according to the surface area per province. 1997

	Almería	Cádiz	Córdoba	Granada	Huelva	Jaén	Málaga	Sevilla	Andalucía

Estadística de coberturas vegetales en Andalucía (Statistics about plant coverage in Andalusia). Consejería de Medio Ambiente (Regional Government Department of Environment). These statistics aim at providing recent and detailed information about the use, the plant coverage,

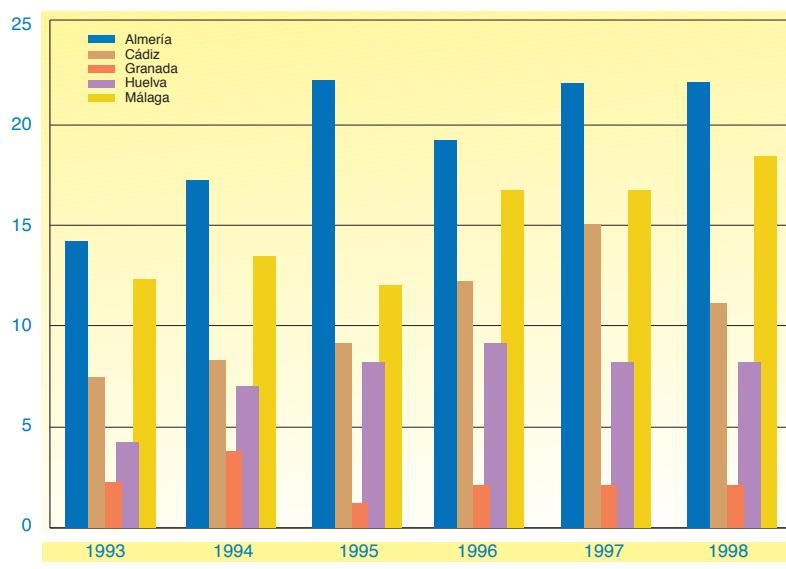

the distribution and history of land in Andalusia. Therefore, the plant coverage data base, produced by digital treatment and subsequent interpretation of satellite images of the Andalusian community, has been exploited statistically at different spatial levels.

The highest mountains in Andalusia (meters) (\*)

Estadística de repoblaciones y reconversiones forestales en Andalucía (Investment and reafforestation statistics of Andalusia). Consejería de Medio Ambiente (Regional Government Department of Environment). These statistics determine the reafforestation type of public and private woodlands and its costs taking into account the following variables: Reafforested hectares per species and reafforestation type in public and private woodlands, its total and unitary costs and the distribution of costs of seeds, seedlings, machinery, labour force and other costs. Reafforestations are divided into mainly protective and mainly producing reafforestation.

Estadística de incendios forestales en Andalucía (Forest fire statistics of Andalusia). Consejería de Medio Ambiente (Regional Government Department of Environment). These activities aim at providing the necessary information to the Administration and forest sector about areas affected by forest fires in each province and in Andalusia on a whole. The following variables are analysed: number of forest disasters, attempts and forest fires, the surface area affected by the fire, causes of the forest fire, means and resources assigned to a forest fire, duration, starting times, etc.

### Causes of forest fires in Andalusia. 1998 (\*)

## 2 Population

Population knowledge and tendencies constitute an important starting point for the planning, sources determination and making of decisions, particularly in the institutional field. In the same way, it is useful in the sphere of the private enterprise, regarding market segments and commercial strategies design.

This chapter includes the most basic and updated available information about Andalusian population: structure, natural movement of the population (NMP) and residential variations, that is, migratory movements from and to Andalusia.

**Population density in Andalusia. 1998**

**Demographic census of Andalusia 1991.** This census - like others - has the following basic objectives:

- To determine the population of the autonomous region Andalusia, of each province and each district.

- To present figures about sex ratios, age groups, education levels, marital status, economic activity, migration and other demographic characteristics.

- To do the groundwork for the elaboration of other statistics and administrative operations.

### Percentage distribution of the population by large age groups. 1996

The 1991 census has the special feature that it was the first to be exploited entirely by the Andalusian Institute of Statistics, which is the reason for its being called *Demographic census of Andalusia. 1991*.

Furthermore, and also for the first time, information has been exploited thoroughly and not by means of differently sized samples, as has been the case in former censuses. This census has been published in nine volumes,

one for each province and one for the whole region. The volumes of the different provinces all comprise the following eight subjects: district data, demographic structure, education, activity, territorial movement, female population, rate of marriage, fertility, ...; population in collectives and foreign population. Each provincial volume also includes a likewise structured section, which provides demographic data about the capital.

### Population pyramid of Andalusia. 1991-1996

INE: Padrón Municipal de Habitantes de 1996

**Local Census. INE.** The Local Census is an administrative document in which all the residents of each municipal district must be registered. Town Councils are responsible for generating and maintaining this register; the INE's mission is to supervise compliance with the technical rules and guidelines, approving the population figures taken from the census, depending on Town Council compliance

with these rules. This document used to be revised every five years. However, advances in computing techniques and improvements in its management, together with the high cost of revision, have led to an amendment to the law, including the abolishment of local census revisions. Therefore, the Local Census Revision dated 1 May 1996 will be the last one carried out.

(\*) Gross rates

(1) Data of Spain in reference to 1996

(2) Provisional data of Andalusia and data of Spain in reference to 1995

**Birth Rate:** (Births/population)\*1000; **Mortality:** (Deaths/population)\*1000; **Marriage Rate:** (Marriages/population)\*1000; **Infant Mortality:** (Deaths of less than one-year-olds/number of births that year)\*1000; **Vegetative Increase:** Gross birth rate minus gross mortality rate.

**Movimiento Natural de la Población - MNP (Natural Movement of the Population - NMP).** The NMP informs about births, deaths and marriages. Like demographic censuses, this type of statistics date back to former times. Originally, this type of information was hidden in church registers, but by the end of the nineteenth century, registry offices were introduced, which started to publish this information annually. This administrative body also was in charge of storing the registered data.

There are various classification criteria regarding the three demographic happenings, which make up the NMP. Thus, births are classified according to sex, place of birth, age of the parents etc, whereas deaths are classified by age, place and cause of the death. Finally, with respect to marriages, age, marital status, occupation of the spouses, etc, are considered.

Source: IEA. Estadística de Variaciones Residenciales 1996  
(\*) International migrations are not included

**Migration balance:** immigrants minus emigrants; **Immigration rate:** (immigrant/population)\*1000;  
**Emigration rate:** (emigrants/population)\*1000; **Net rate:** immigration rate minus emigration rate.

**Estadística de Variaciones Residenciales - EVR (Statistics of Residential Variations - SRV).** The SRV was worked out with information about the movements in the district lists of inhabitants and is meant to quantify the migration between different origins and destinations. Thus, migrations can be divided into distinct categories, of which

the most common is the difference between immigration and emigration, depending on whether the movement takes place inside the country, or to or from a foreign country. Furthermore, data are grouped according to criteria like sex, age group, academic degree, etc.

# 3 Education and occupational training

Education constitutes, together with the family, one of the main elements in the socialisation of the individual. Its aim is to contribute to the physical intellectual and personal development of the individual. As a result of this, the educational system situation, its offers and resources, is very interesting for most people: parents, pupils and teachers.

This chapter begins with a scheme about the educational system nowadays. It gives us basic information about pupils, units and teachers in the different educative levels of regulated education and other fields of education (music, dancing, dramatics, foreign languages and applied arts as an occupational training)

## Ley de Ordenación del Sistema Educativo (LOGSE 1990) Ley de Reforma Universitaria (LRU 1983)

**Censo de Población de Andalucía (Demographic Census of Andalusia).** Here information is given about the levels of education reached by the population, besides supplying data about people, who were studying at the time the census was taken.

Although this publication is extremely valuable because of providing general knowledge about the population's

level of education, it loses interest because of its long-drawn out ten-year recurrence (the lastest being the Demographic Census of Andalusia 1991). This circumstance makes it advisable to have recourse to alternative statistical sources or institutions, which compile this type of information more frequently.

## Pupils and units per levels of education per provinces. Term 1997-98

# 4 Labour market

The structure and evolution of the labour market is of noteworthy interest for people. This has caused the realisation of many statistical activities, that allow us to know in detail the labour situation in society detail.

As set out below, this chapter offers a data selection

of the most relevant aspects: workers' earnings, labour costs, industrial accidents, carried out contracts, and others. They all reveal the situation of the labour market in Andalusia, as well as the employment evolution.

**Active and working population. 1998 (thousands of persons)**

**Encuesta de Población Activa (EPA) (Active Population Survey).** This survey, taken by the Instituto Nacional de Estadística (INE, National Statistics Institute) since 1964, is not an exhaustive study but, as indicates its name, an investigation through survey. After various changes in the past, nowadays it is taken every three month.

The main objective of this survey is to know more about the composition and evolution of the number of

active, working, unemployed and inactive people according to different classification criteria, as for example sex, age, economical sector, profession and other aspects which are relevant to the labour market. Furthermore, the levels of the distinct spatial groupings- Spain, autonomous regions and provinces - have access to this information.

The survey is addressed to 64,000 family accommodation units, thus comprising approximately 200,000 persons.

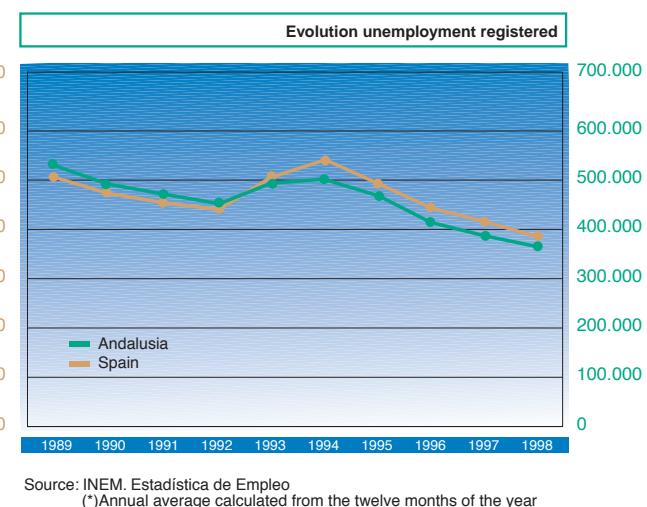

**Unemployment registered per provinces. Year 1998 (thousands of people) (\*)**

Unemployment

**Employee:** worker whose social security subscription group is 1 to 7

- 1: Engineers and graduates
- 2: Technical engineers, technicians and skilled assistants
- 3: Chief clerks and foremen
- 4: Assistants without a degree
- 5: Non-administrative officials
- 6: Subordinates
- 7: Auxiliary clerks

**Worker:** worker whose subscription group is 8 to 11

- 8: First and second grade officials
- 9: Third grade officials and specialists
- 10: unskilled workmen
- 11: Workers under 18, independent of the professional category

**Earnings:** remuneration to be paid in cash or kind to workers. It includes the basic wage, extra pay, extra hours and arrears, but neither expense allowances nor indemnifications. All concepts are gross quantities.

**Ordinary pay:** Monthly pay, including extra pay if distributed proportionally.

**Total pay:** The sum of ordinary and extra pay and arrears.

## Labour Cost and its components. 1996

Source: INE. Encuesta del coste de la Mano de Obra

**Encuesta del Coste de la Mano de Obra (Survey about the Labour Force Cost).** The survey about the labour force or labour cost is an statistic operation with a quadriennial periodicity. It is carried out in the European Union framework with common methodological criteria and contents in order to obtain comparable results about the level and structure of the labour cost.

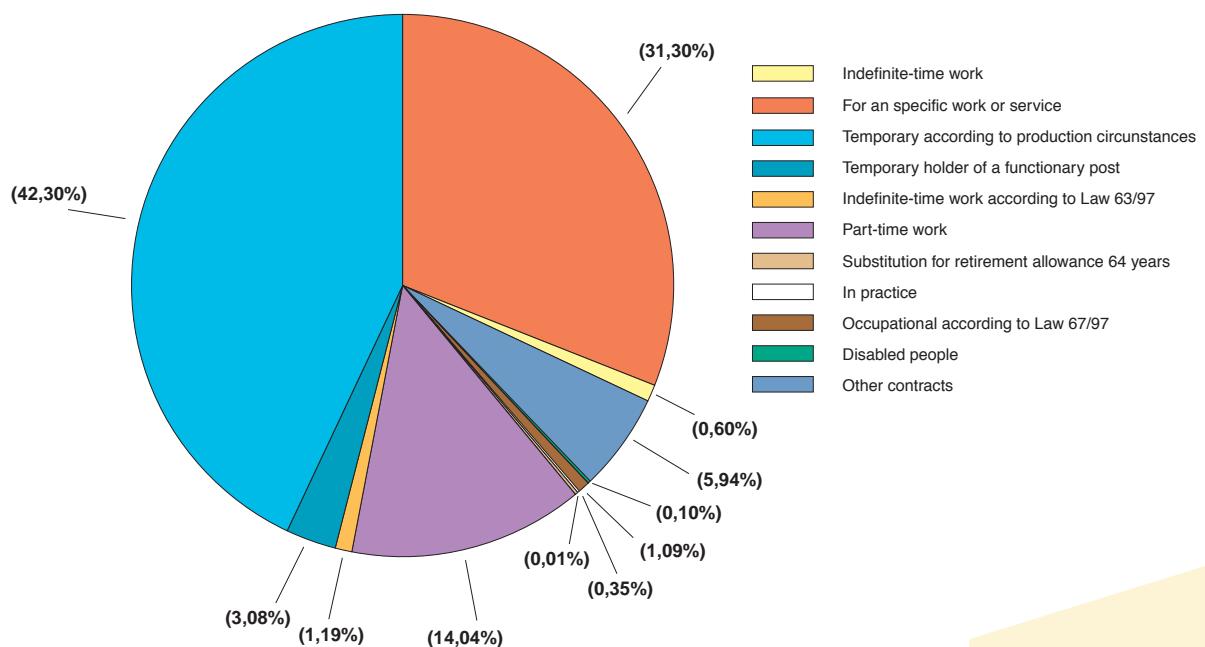

The statistical unit is the account of the Social Security contribution. This unit does not correspond with the company neither the establishment nor the working centre, though it coincides with the latter many times. The field of population includes all the accounts of Social Security contribution, which belong to companies with at least ten workers.

## Medical resources and public health

Information about public health in Andalusia is necessary to evaluate the present situation and confirm the achieved advances. To value and satisfy the possible needs of public health constitute one of the main aims of sanitary systems in modern societies.

The available information in this chapter refers to

medical resources: health service establishments and staff, hospitals, beds...and to their distribution. It also refers to the way people use them by examinations, admissions and stays in hospitals and to the way public health is influenced by all this and by many other economical and social factors.

**Health Resources and their Distribution.** Statistics with information about health resources are provided basically by the Regional Government Department of Health and the Andalusian Health Service. These furnish information about health resources at two levels:

- Primary care corresponds to the first level of health care and takes place in health centres, surgeries and other

health establishments and comprises preventive, curative and rehabilitation care as well as health promotion. The information given in this area refers basically to public health centres and services, and constitutes the "Estadística de Actividad en los Distritos de Atención Primaria" (Statistics of district welfare activities regarding primary care), which was elaborated by the Andalusian Health Service.

• Specialised care offers diagnosis, treatment and rehabilitation means which, because of their specialisation or characteristics, are not available at the primary level of health care. It includes state health-service hospitals, outpatient departments and hospitals.

The information offered in this area may refer to either public or private centres, depending on the studied sources. Thus information is drawn from the "Catálogo de Hospitales de Andalucía" (Catalogue of hospitals in Andalusia),

elaborated by the Consejería de Salud (Regional Government Department of Health), which includes basic characteristics of all hospitals in Andalusia, may they be public or private. On the other hand, if the used source comes from the Andalusian Health Service (Estadística de Actividad Asistencial en Atención Especializada =Specialised health care statistics) it provides more detailed information about hospitals belonging to the public network of the Andalusian Health Service.

**The Use of Health Resources.** In this case information may refer to both primary and specialised care. Therefore, the already mentioned sources are used, in addition to information provided by the "Estadística de Establecimientos Sanitarios en Régimen de Internado" (Statistics of In-patient Health Care Establishments), elaborated by the Regional Government Department of Health, and the "Estadística sobre Datos Hospitalarios Básicos" (Statistics about Basic Hospital Data) of the Andalusian Health Service. All these, together with the already mentioned one of

specialised care in the Andalusian Health Service, provide detailed information especially about hospital processes and also about the register of prior appointments which supplies all data respect outpatient consultations.

Furthermore, other specific sources give information about pharmaceutical services and the use of certain centres and health services, as for example infant vaccinations, transplants, blood donation, termination of pregnancy, etc.

**The State of Public Health.** Information about the state of health is partly based on data about diseases the population suffers, which make up a set of statistics prepared by the Regional Government Department of Health (Statistics about tuberculosis, AIDS or notifiable diseases).

On the other hand, information about mortality and causes of death respect the population may also be obtained from the Register of Mortality, which is kept jointly by the Andalusian Institute of Statistics and the Regional Government Department of Health.

# 6 The primary sector

As in most advanced economies, the primary sector has given up its chief role to favour the other economic sectors in Andalusia. Nevertheless, the activity of this sector is still the motive of its economic growth and of the exportations, as well as the mainstay of the food and

agriculture industry in Andalusia.

This chapter refers to information about the agricultural production, the cattle census, the quantity of fish caught and other related aspects. All this allows us to get an idea of this sector behaviour in Andalusia.

Source: INE. Encuesta sobre la Estructura de las Explotaciones Agrícolas. 1995  
(\*) The size is given in Has. of SAU

**Area used for farming.** This term refers to all the areas of cultivated land as well as to permanent pastures. Cultivated land includes herbaceous cultivation, fallow land and that destined to the production of wood.

**Farm.** Economical and technical unit from which agrarian products are obtained on the responsibility of its owner. Said economical and technical units are generally characterised by the use of the same means of production: labour force, machinery.

**Farm with land.** A farm with more than 0.1 ha. in one or several plots though they are not adjacent

**Encuesta sobre la estructura de las explotaciones agrarias.** INE. Its objective is to know the current structure of the agricultural sector and its evolution as compared with earlier surveys and the latest agricultural census (1989). It also meets the European Union demands for member countries to implement an agricultural survey programme (one Agricultural Census between 1st December 1988 and 1st March 1991 and sample surveys in 1993 , 1995 , and 1997).

The survey is conducted nation-wide and covers the farming season from 1st October of one year to 30th September of the next, which is considered the reference year. The national and autonomous regions results are published. They deal with the used agricultural area (farm size, crop type, tenancy system, livestock, irrigated land, family and paid labour,...) and with techno-economic orientation (economic size, gross margin, main orientation,...)

**Anuario de Estadísticas Agrarias y Pesqueras** (Yearbook of Agrarian and Fishing Statistics). This yearbook, published by the Regional Government Department of Agriculture and Fishing, is an abstract of statistics about the Andalusian agrarian and fishing sector which correspond to the year in question. Its main objective is the structured spreading of interesting information regarding the agricultural, forest, cattle and fishing

subsectors in Andalusia.

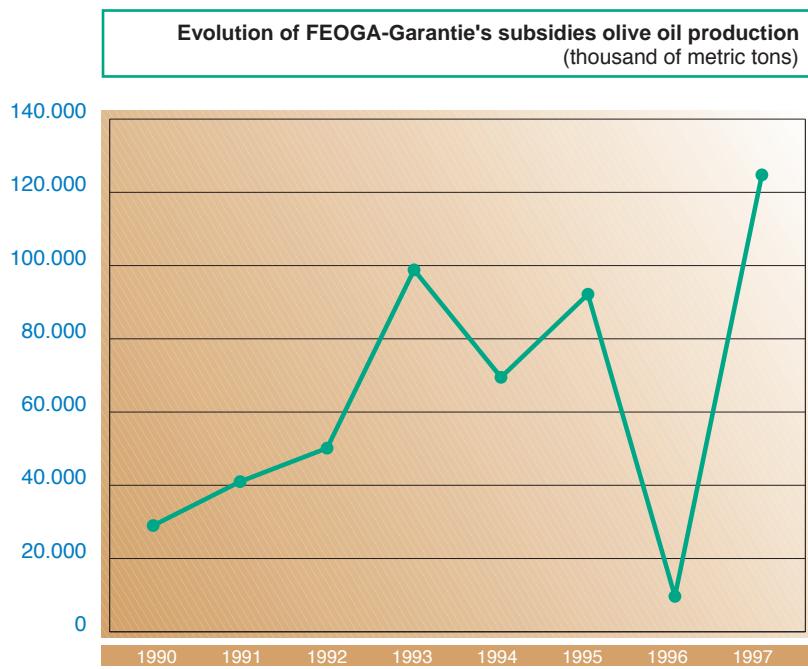

Most of the information proceeds from the Provincial Offices' Statistics Departments of the Regional Government Department but some is also obtained from the Provincial Offices of Fishing and Fish-farming of the Regional Government Department as well as from the Andalusian and the National Institute of Statistics.

## The industrial sector

The level of industrial development means the motive of the general economic activity and the indicator of its situation. This is due to the capability of industry to encourage the other sectors. The industrial sector is also the main support for foreign trade and economic productivity.

This chapter provides relevant data about the features of Andalusian industry per branches, the industrial investments, the generated employment and other aspects. In the same way, it also gives information about the evolution of the industrial sector, which is an important element in the study and valuation of its situation.

Source: IEA

**Indice de Producción Industrial de Andalucía - IPIAN** (**The Industrial Production Index in Andalusia**). The industrial production index in Andalusia, worked out by the Andalusian Institute of Statistics (IEA, Instituto de Estadística de Andalucía), is a trend indicator which aims at measuring the short-term evolution of the gross added value of the Andalusian industrial sector.

The IPIAN is applicable to the economical territory of

the Autonomous Region of Andalusia. An industrial activity is attached to said territory independent of the legal form of the enterprise and whether or not it is bound to entities from other regions. A production unit may be identified as belonging to the industrial sector of the Autonomous region of Andalusia, when it maintains an establishment or permanent work centre in this region where activities take place which are integrated in the industrial sector.

### Andalusian industry main features per activity branches. 1998

	Working population	Exploitation incomes (*)	Exploitation expenditures(*)	Staff cost (*)
Industries related to extraction and oil, energy and water	6.594	539.574	523.556	36.142

 (\*) Million of pesetas

**Encuesta Industrial de Empresas y Encuesta Industrial de Productos (Industrial Survey of Enterprises and Industrial Survey of Products).** The industrial survey of enterprises and the industrial survey of products, elaborated by the National Institute of Statistics, continue the disappeared industrial survey and allow to analyse rather completely the activity in the industrial sector. In Andalusia, said publications are presented by the Institute of Statistics of Andalusia with more details about this Autonomous Region.

These annual surveys aim basically at providing information about the main characteristics of the different sectors which make up the industrial activity of the economy, including the generated employment rate as well

as exploitation costs, investment and production. In this way, the national and international demand for information about this subject is tried to be satisfied.

Starting in 1993, the name of these publications was changed in order to be adapted to the regulations PRODCOM (PRODucción COMunitaria = Community Production) - in relation to the harmonisation of industrial production characteristics in countries of the European Community. It obeys the recommendations of Eurostat, the official European institution of statistics. Its main difference with respect to the former Industrial Survey consists of the survey unit for the industrial Survey of enterprises, now being the enterprise and, for the industrial survey of products, the establishment.

## Town planning, housing and construction

Designing the cities to make them places to live in and satisfying a basic need of human being such as housing are essential objectives related to town planning and construction. They are so important that the public sector gives them a preferential position in their policy.

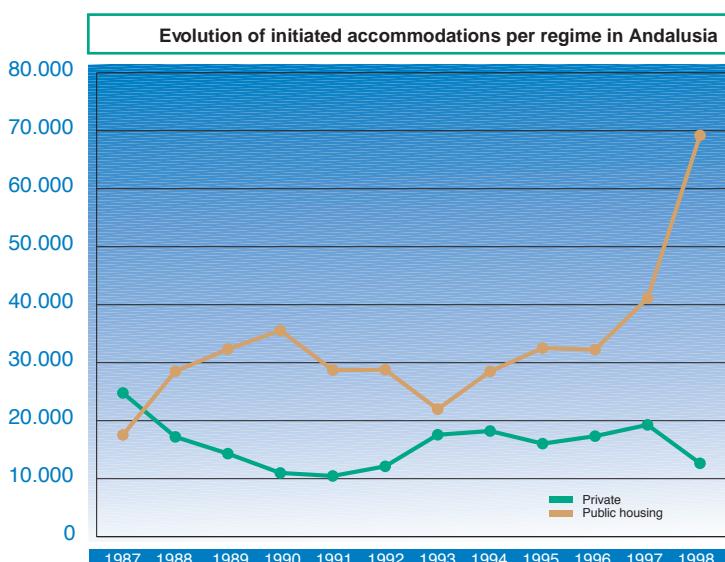

This chapter offers information about these three

interrelated activities. It provides data of urban units and their value in the land-register, housing types and regiments, the evolution of public expenditure in building and infrastructure, and the premises according to the type of their activity in Andalusia.

(\*) INE. Censo de Viviendas 1991

**Censo de Viviendas (Housing Census).** This census comprises a set of operations designed to compile, summarise, evaluate and publish data as regards all the space destined to human accommodation understood as such (family housing), and to number that, which is not conceived for this purpose but is used as such (permanent or mobile accommodations). The 1991 census is the fifth

of all housing censuses. From 1950 to 1970, censuses were taken in years ending in zero, with reference to the 31st of December. Starting in 1981, they were taken in years ending in one in order to adjust to European Community standards. Furthermore, as it is quite difficult to collect data the last day of the year, the reference date was changed to the 1st of March.

## Transport and communications

A society degree of development reflects in transport and the quality of communication infrastructures. This is due to the fact that transport enhances the utility and the economic value of goods, as they are transferred to places where they are needed, and communications favour the

commercial, social and cultural interchanges.

This chapter offers information about both aspects. It details the types of roads, the road network density, the motor vehicle pool, the passenger and cargo traffic or the telephone service in Andalusia.

### Length of roads per type 1997 (km)

	Andalucía	España
Toll highways	93	2.063
Free highways and dual carriageways	1.384	5.687
Two-lane roads	276	1.313
Conventional single-lane roads	22.932	153.732

# 10 Trade and tourism

The trade and tourist activity in Andalusia becomes one of the most substantial sources of revenues within the service sector. In a great deal, it is the responsible of the tertiary level achieved by the Andalusian economy.

In this chapter significant information is given to know

closely not only the trade situation (establishments involved in trade, number of registrations in the economic activities taxes, import and export value...) but the tourist situation (number and origin of tourists, hotel accommodation occupation rate...)

**Distribution of establishments involved in domestic trade according to the number of employees** (January 1st, 1998)

Source: IEA. Base de datos de Actividad Económica de Andalucía

**Employees:** average number of people participating in the economic activity of the establishment during the reference period of a year, who were paid in cash, in kind or took a share in the business profit.

**Base de datos de actividad económica de Andalucía** (**Economic Activity Database of Andalusia**). This database was elaborated by the Andalusian Institute of Statistics (IEA) with the aim of presenting basic data about goods and service production centres of the Andalusian Autonomous Community. It is a reference framework for census elaboration, sample and data collecting surveys, provided that the studied units develop an economic activity.

It consists of an organised set of magnetic-taped information, including identification data, location, and classification of the establishments according to the number of employees and the economic activity. This information is obtained from administrative sources and statistical files, in addition to other information from IEA statistical operations.

**Trade percentage distribution. 1997**

Source: INE. Directorio Central de Empresas 1998 (DIRCE)

**Directorio Central de Empresas, DIRCE (Central Business Directory). INE (National Institute of Statistics).** Updated on the 1st of January of 1997, it is a source of information about the registration, withdrawal and continuance of enterprises, which is known as business demography.

It consists of an organised set of magnetic-taped information, including identification, location, territorial distribution and a classification according to the number

of employees and the economic activity of the companies. It is obtained from administrative sources and statistical files, and complemented with other data coming from current statistical operations of the Central Statistical Office. Its main goals are to provide a framework for the design of sub-populations to elaborate surveys, and to provide an appropriate source for the elaboration of business structural statistics.

(1) Provisional data

**Comercio Exterior de Andalucía (Andalusian Foreign Trade).** Released by the Institute of Statistics of Andalusia since 1990, this publication covers an important need within economical statistics currently carried out in the Community. It contains information about import and export that take place within the Autonomous Community, obtained from data provided by the Customs and Special

Tax Department. Andalusian Foreign Trade with the EU and other countries refers to commercial exchanges of goods and merchandise, since the lack of "regional customs" and its resulting administrative registration prevents commercial flux among autonomous communities from being easily calculated.

(\*) Include hotels, hotels-apartments and boarding house

**Movimiento de Viajeros en Establecimientos Hoteleros (Traveller flow in hotel accommodation).** This is the most appropriate source to study the Tourist Sector. Both the IEA and the INE participate in it by providing disintegrated data, the first about Andalusia, the second about the rest of the country. The whole hotel accommodation sector in the Autonomous Community is monthly surveyed in order to obtain relevant information.

Here, the general goal is to obtain synthetic indicators that permit to evaluate both the activity and short-term predictions in the tourist sector.

The information is arranged according to the number of travellers and overnight stays, and classified by hotel categories and the travellers' residence country, occupation rate, average stay and number of people employed in these activities.

### Travellers flow by hotel accommodation. 1998 (\*)

	Accommodated travellers		Overnight stays		Overnight stays per traveller	
	Spanish	Foreigners	Spanish	Foreigners	Spanish	Foreigners

# 11 Finance and business

It is extremely valuable to know about business and financial activities in order to define the behaviour of the private sector of a given economy, and consequently, to draw conclusions about the overall economic situation.

This chapter provides information about the evolution

of bank deposits and credits, mortgages, creation and dissolution of mercantile societies, employment rates and suspensions of payments. They are all fundamental aspects in a society financial and business activities.

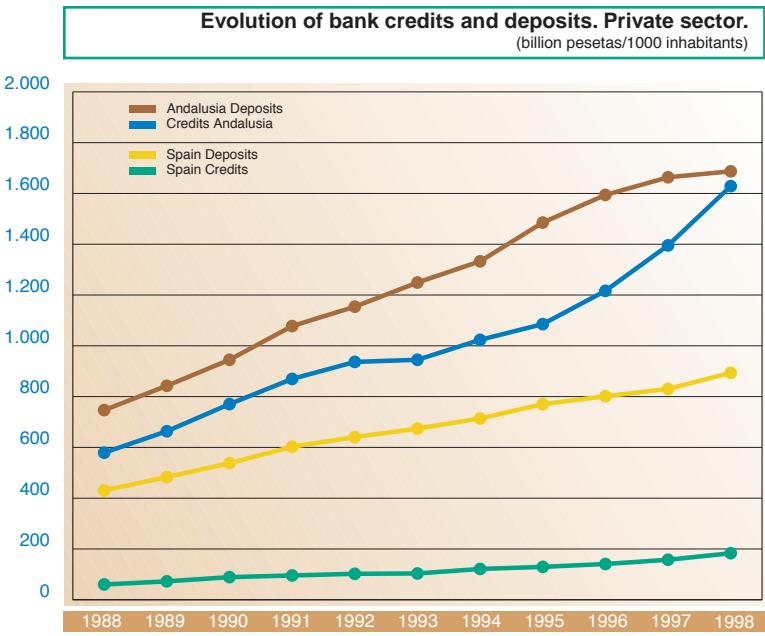

**Private sector. Deposits and credits per province. 1998 (billion pesetas)**

Source: Estadísticas de Declaraciones de Quiebra y Suspensiones de Pagos  
(\*) Provisional data

Estadística de Declaraciones de Quiebras y Suspensiones de Pagos (Statistics of Bankruptcy Declarations and Temporary Receivership). It compiles information about the number of temporary receivership and bankruptcy declaration files started in Courts of First Instance within the Spanish territory. The number of temporary receiverships and bankruptcies is obtained per province and Autonomous Community, as well as the assets and liabilities of the relevant companies. They are also classified according to their economic activity and legal status, type of bankruptcy, reason for the temporary receivership and payment proposal. The reference date here is that of opening of the file.

**Temporary receiverships:** any trader or mercantile corporation can file for temporar y receivership if they own enough assets to cover all their debts but foresee the impossibility to face them on the dates they expire, due to liquidity problems, scarce production or service demand, low productivity or other reasons.

# 12 Public administration accounts

The Budget is defined as an economic plan for public revenues and expenses that prevails during the financial year. According to this, the aim of the Budget is to achieve a rational and efficient use of public resources and to meet the social demands in the most suitable way.

Starting from a transparent assumption, public administration gives society all the necessary data in order to know the evolution of revenue and expenditure policy of all the administrative bodies in the Andalusian Autonomous Community.

**Evolution of revenue budgets in the Andalusian Autonomous Community per chapters. (million pesetas) (\*)**

Regarding revenues, it is important to know their origin. Regarding expenses, a functional classification reflects the expenditure policy (i.e., the pursued aims) and an administrative classification provides an accurate idea of their structure.

Within the Andalusian Community framework, budget

statistics are provided by the Regional Government Department for Economy and Treasure. Within a national framework, it is the Ministry of Economy and Treasure, and within a European framework, the European Commission.

# 13 Household revenues and expenditures

Household revenues and expenditures are the two facets that control home economies. Its study allows us to know the quantity and level of home incomes, as well as their materialisation into consumer expenditures.

This chapter shows us information about the different types of earnings, that is, wages, pensions, unemployment benefits and others, and about the evolution of Andalusian

household incomes. It also offers data about the distribution of household expenditures among the different needs of the consumer: food, clothing, and footwear, medical and health care, education and culture, housing, etc. In the same way, it gives us information about the evolution of the retail price.

(P) Provisional data

(\*) Difference between revenue and expenditure generated in business activity

**Distribution of the number of employees and wages received in Andalusia. 1996**

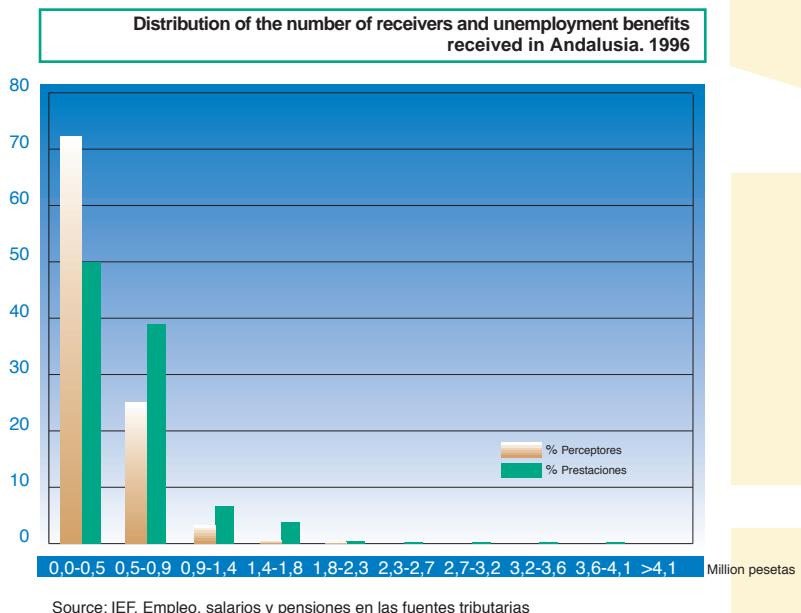

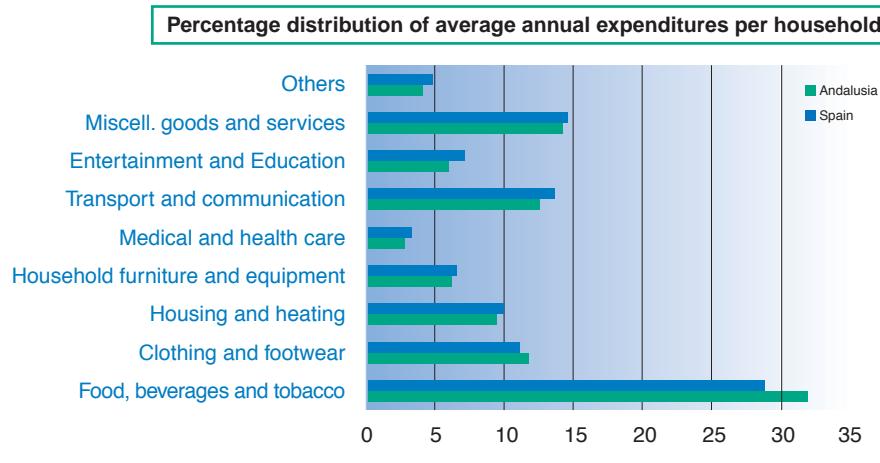

Source: IEF. Empleo, salarios y pensiones en las fuentes tributarias

**Empleo, salarios y pensiones en las fuentes tributarias (Employment, wages and pensions in tax sources).** In order to know the household incomes per Autonomous Regions we can resort to publications that do not come from the EBPF. In this sense, tax sources are a valuable resource to know volume and distribution of

household incomes. Similarly, we can point out the statistics of personal income tax and patrimony of Inland Revenue of the Ministry of Finances, as well as the publication Employment, wages and pensions in tax sources of the Institute of Fiscal Studies.

Source INE. Encuesta Básica de Presupuestos Familiares. Año 1990-91

**Encuesta Básica de Presupuestos Familiares, EBPF (Basic Survey of Family Budgets).** INE (National Institute of Statistics). This structural survey mainly aims at providing an overall view of broad aspects of living conditions: expenditures, incomes, household equipment, housing conditions and services ...

But as this survey is not published very often (only every 10 years, the last one referring to the period from April 1990 to March 1991), its usefulness is seriously limited, especially when the last publication is from so long ago as happens in this case. This is particularly the case regarding one of its components, which is the volume

and distribution of household incomes. For this reason, the INE carries out an annual continual survey of household budgets. However, since the size of the sample is quite limited, data regarding household revenue and expenditure per groups of expenditures for the Autonomous Regions are not reliable.

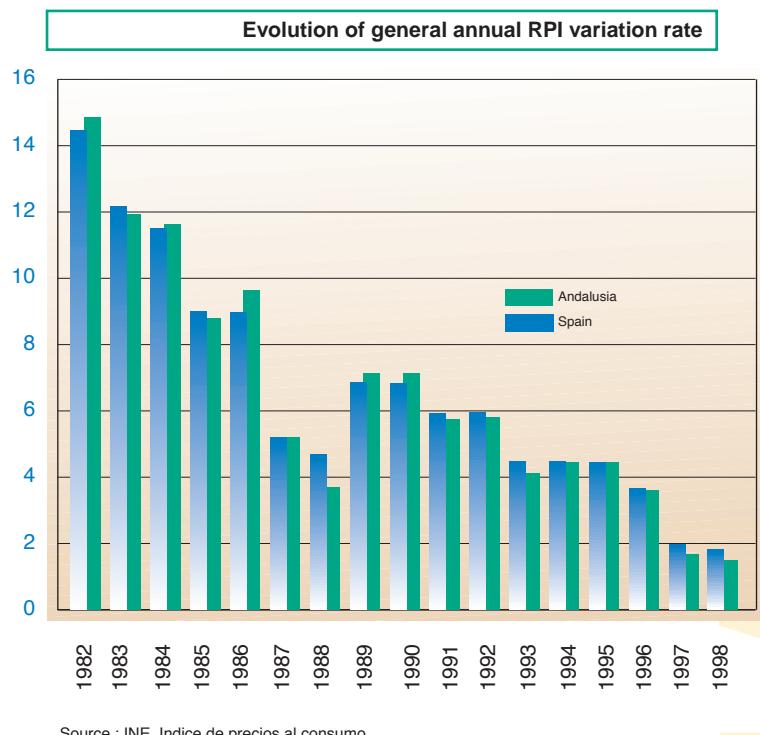

On the other hand, in spite of the aforementioned, in order to know the household expenditure structure (average cost of a week's shopping) per Autonomous Regions, the only available source is still the EBPF, and therefore, the shown data come from that survey.

### Retail Price Index (RPI). Annual average. General index and index per groups.1998

	Andalusia		Spain	
	Index (1992=100)	Annual variation rate (*)	Indice (1992=100)	Annual variation rate (*)

Source: INE. Índice de precios al consumo. Datos definitivos. Base 1992  
(1) Average price level variation throughout the year (average annual inflation)

**Indice de Precios al Consumo, IPC (Retail Price Index, RPI).** INE (National Institute of Statistics). This index statistically measures the evolution of goods and service prices consumed by the population residing in family accommodations in Spain. In the Basic Retail Price Index System 1992, the arithmetic mean of the monthly rates of the aforementioned year, calculated according to this system, equals 100. The survey of family budgets (EPF, Encuesta de Presupuestos Familiares) carried out in 1991 provided basic information about household expenditures in consumer goods and services.

## The social services and welfare programme

The knowledge of the most disadvantaged sectors in society is essential to define and apply suitable social measures and policies for the assignment of resources. These two factors have advantageous effects on those sectors which require a special intervention.

Next, we offer statistical data in order to inform about the different Andalusian welfare and care centres, which are at the disposal of the different groups. We also offer information about the number of fosterage and adoptions and about the social and financial assistance beneficiaries.

**Fosterage:** Protection measure, by which a minor is integrated temporarily into a family that is not the one constituted by his biological parents or guardian. A fostering family takes on the minor's custody without changing his paternal authority or guardianship.

**Adoption:** Legal protection measure, by means of which a minor is permanently integrated into a family, that is not his biological family, with the same consideration, rights and duties as legitimate children. The adopting family takes on all obligations arisen from paternal authority, and the ties between the minor and his biological parents are usually dissolved with only few exceptions.

## Financial assistance beneficiaries per provinces. 1998

**Tax-free retirement beneficiaries:** People over 65, who lack enough income, live in Spanish territory for a specific period of time, have the right to obtain this pension.

**Tax-free disability allowance beneficiaries:** People over 18 and under 65, who lack enough income, are affected by any kind of disability or chronic illness equal or superior to 65%, and live in the Spanish territory for a specific period of time, have the right to obtain this pension.

**L.I.S.M.I. ( Disabled Social Integration Law):** Socio-financial assistance for the disabled.

**F.A.S. (Welfare Fund):** Old age or illness beneficiaries of the Social Work Fund.

# 15 Culture and leisure time

Technological advances lead people to have more free time. They can devote this free time to culture and to the development of human knowledge and intellectual faculties. To know the activities people choose in free time is indispensable not only to suit people demands but to encourage less usual activities.

This chapter deals with aspects related to culture. Not only in the use done in libraries museums, archaeological or monumental places, or the less traditional gambling rooms, but in the supply by publishing production amount or popular shows.

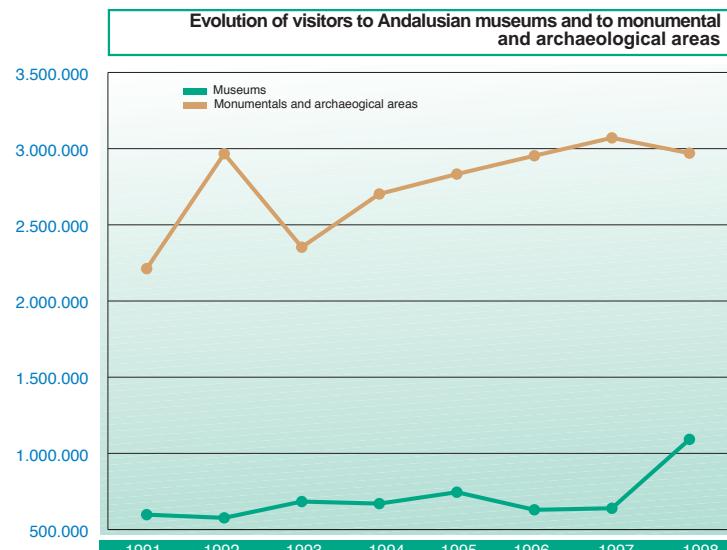

Source: Consejería de Cultura

**Estadística de Bibliotecas (Library Statistics).** INE (National Institute of Statistics). Its main aim is to know both the number of libraries and service points in Spain as well as their funds and movements, equipment, staff, activities and expenses. The study has been carried out per type of library and per autonomous region and province.

This research is carried out every two years. The statistics include all libraries within the Spanish territory,

of any administrative dependence, except for those which are private and not open to the public. Information refers to the calendar year, although some features refer to the 31st December of the studied year.

The INE has been carrying out these statistics since 1960 but reorganised them in 1972 in order to adapt to the UNESCO recommendations, which emerged from the conference in 1970.

# 16 Social participation and justice

Among the different forms of social participation, the electoral one shows us the population's awareness about the importance of taking part in public life by voting. From another point of view, the independent action of Justice Administration is the socially accepted way to protect the performance of duties and the respect for people rights.

This chapter gives information about the electoral and other forms of participation such as complaints to the

Andalusian Ombudsman, which shows a concern in improving the Administration-Society relationship, or the way young people responsibly decide about doing military or social service. On the other hand, it provides data related to the Andalusian judicial activities, which occur in high courts, provincial courts and courts, and about the crimes or offences they resolve.

**Composition of the Andalusian Parliament**

Source: Consejería de Gobernación y Justicia

## Electors

**General Election:** All Spanish citizens of age (over 18), in full possession of their civil and political rights, both residing in Spain or abroad, are electors.

**Andalusian Parliament Elections:** All Spanish citizens who, holding the right of active suffrage, are registered in the census of a municipality in the Andalusian Autonomous Region or, residing abroad, have had the last administrative residence in Andalusia, are electors.

**European Parliament Elections:** All Spanish citizens who are electors in the General Election and EU foreigners who, living in Spain, choose to vote in their home base, are electors.

**Local Elections:** Apart from Spanish electors, foreign residents whose respective countries allow Spanish citizens to vote in similar elections (the Netherlands, Denmark, Norway and Sweden) are also electors.

**Estadísticas Judiciales de España (Judicial Statistics of Spain).** This publication, prepared by the National Institute of Statistics, compiles annually, since 1959, and per provinces, the activities in courts of different judicial nature, excepting social courts. Information refers to many different aspects: number of matters, sentences, types of crimes or offences, imposed penalties, convicted people, etc.

This information is collected by means of bulletins, which are completed by the courts monthly or every three or six months according to circumstances.

Anuario Estadístico del Ministerio de Justicia e Interior (Statistical Yearbook of the Ministry of Justice and Home Office). This yearbook presents diverse information about the different action areas of this Ministry.

It has become a useful tool to learn about the essential aspects of our judicial and social reality. Different departments of this Ministry participate in the preparation of this publication.

# 17 Great numbers of the andalusian economy

The great numbers of the Andalusian economy try to reflect the results of the economic activity of the different elements that participate in the Andalusian Autonomous Region from different approaches: demand, supply and generation of incomes.

This chapter refers to the evolution of the great regional numbers (macroeconomic magnitudes): gross added value, income, consumption and saving. They all originate

in the Regional Accounts of Spain. On the other hand, it also offers data about the National Income in Spain and its distribution per provinces.

In the same way, this chapter includes the Andalusian macroeconomic chart concerning 1995. It shows the different constituents of the Gross Domestic Product at market prices from the three approaches aforementioned.

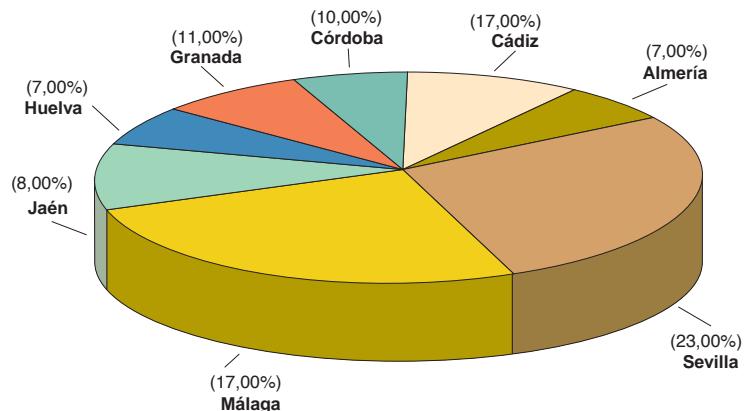

**Evolution of the main macroeconomic magnitudes** (million pesetas)

	1990	1991	1992	1993	1994(P)	1995(P)	1996(A)
<b>Andalusia</b>

(P): Provisional Data

**Sistema de Cuentas Económicas de Andalucía. Marco Input-Output 1995 (System of Economic Accounts in Andalusia. Input-Output Framework 1995.) IEA.** The 1995 Input-Output Framework is an statistic-accountant instrument. It states the whole operations of production and distribution, which occurred in the Andalusian economy during 1995. This work adopts the methodology in the new European System of Accounts (ESA-95).

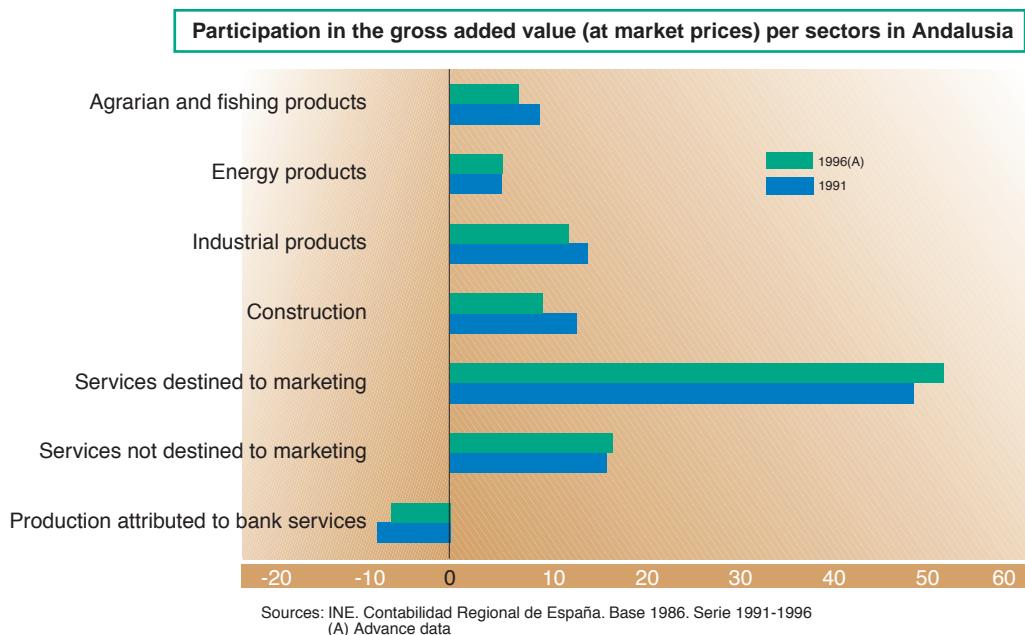

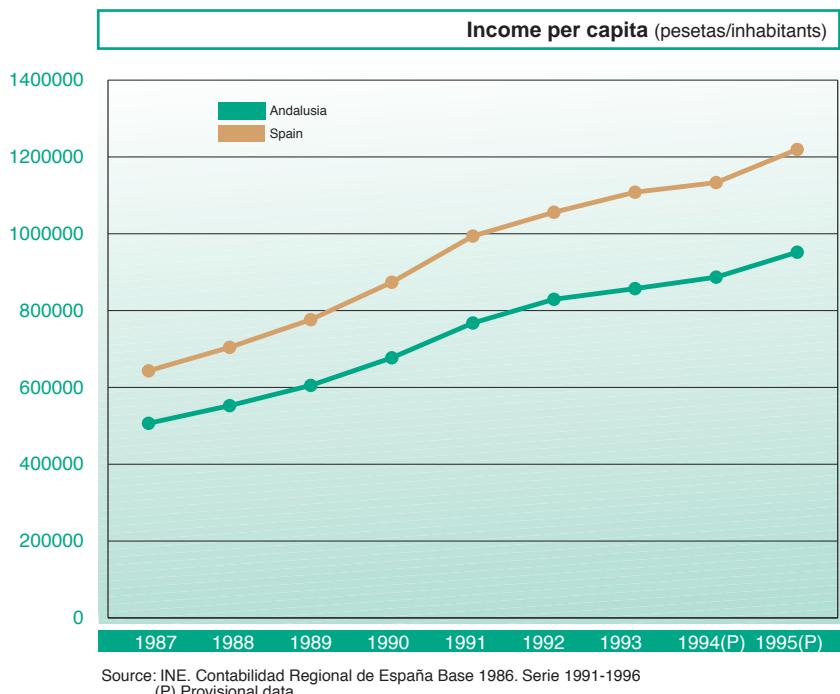

The 1995 Input-Output Framework is useful for the

economic analysis as a resource of statistic information and as a solid pattern. It allows to make economic predictions under certain conditions. Starting from the Input-Output Table, the Andalusian macroeconomic chart has been obtained. It shows the valuation of the Gross Domestic Product (GDP) at market prices by the three ways, (demand-supply-income) according to the following scheme:

<b>Andalusian macroeconomic chart. 1995</b>		
	(millions pesetas)	%
<b>Demand</b>		
<b>Final domestic consumption expenditure</b>	<b>8.960.719</b>	<b>90,07%</b>
Individual domestic consumption expenditure	6.942.042	69,78%
Expenditure in the individual consumption of public administrations and non-profitmaking institutions at the service of home life	1.351.683	13,59%
Colective consumption expenditure	666.994	6,70%
<b>Gross capital formation</b>	<b>2.639.736</b>	<b>26,53%</b>
<b>National demand</b>	<b>11.600.455</b>	<b>116,60%</b>
<b>Foreign balance</b>	<b>-1.651.947</b>	<b>-16,60%</b>
Good and service exportation (FOB)	2.998.442	30,14%
Good and service importation (CIF)	4.650.389	46,74%
<b>Gross domestic product at market prices</b>	<b>9.948.508</b>	<b>100,00%</b>
<b>Supply</b>		
<b>Total gross added value at basic prices</b>	<b>9.301.320</b>	<b>93,49%</b>

Sources: BBV. La Renta Nacional de España y su distribución provincial

(A) Data advance

Income: disposable gross family income

**La Renta Nacional de España y su distribución provincial (The National Income of Spain and its distribution per provinces).** The Regional Accounts of Spain are not the only source to be used to study the economic aggregates, especially when approaching the

provincial level, as they supply only little information about provinces. In this case, the "National Income of Spain and its distribution per provinces" by the 'Banco Bilbao Vizcaya' may be used, which has been published, though not annually, since 1955.
