presentation

Andalusia Basic Data is an annual publication belonging to the Andalusian Institute of Statistics . Its aim is to facilitate the comprehension and analysis of the different facets, which shape the economic and social reality of the Autonomous Region.

The publication offers, in a comfortable format, a compendium of the most updated statistical information. It is organised in 16 thematic chapters and arranged in more than 120 tables and graphics.

This edition corresponding to the year 2000 presents some novelties of content that deserve to be pointed out. In the chapter about the Territory and Environment, we offer new information about the surface of the different territories of the Autonomous Region of Andalusia, thanks to a cartographic revision and to the application of new techniques in the estimation of geographical demarcation. On the other hand, the chapter Trade and Tourism incorporates data about prices (in previous editions this information was located in the chapter on Household Revenues and Expenditures). The third novelty can be found in the section Finances and Business in which we included facts and figures from the Central de Balances de Actividades Empresariales de Andalucía (Central of Business Balances in Andalusia). Lastly, the chapter relating to Great Figures of the Regional Economy presents data taken from the Quarterly Accounting of Andalusia, carried out by the Andalusian Institute of Statistic.

Andalusia Basic Data is, by nature, a markedly informative publication about the available data of the Autonomous Region of Andalusia. Due to this, in order to make easy the data interpretation, this edition includes methodological notes about the statistical operations carried out, and information about concepts, used variables, as well as data resources. Besides, at the end of each thematic section, users will find references to other sources from which they can obtain more information.

Scholars and agents of the economic and social life, and society in general, will have at their disposal a synthesis of the most relevant information about Andalusia, which will be useful and valuable for their professional and daily task.

Magdalena Álvarez Arza

Counsellor of the Regional Government Department for Economy and Treasure
President of the Andalusian Statistics Council

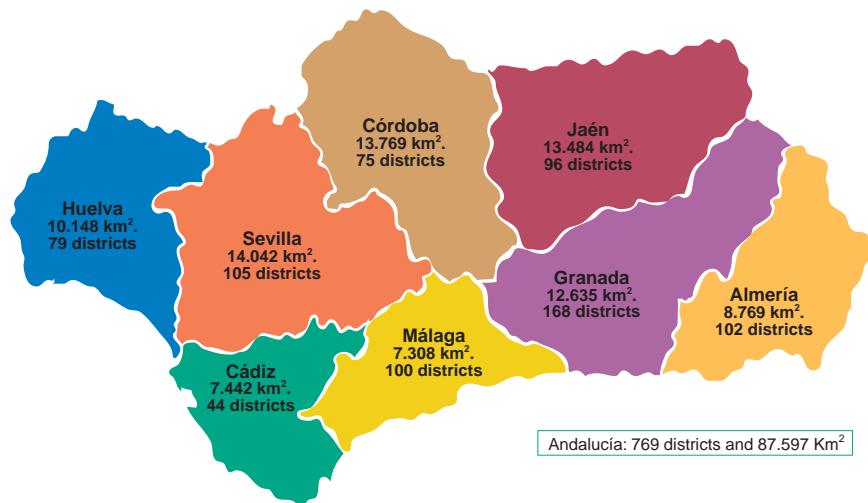

1 Territory and environment

The environment condition in urban and natural spaces is a socially relevant field in modern societies. This has provoked a growing demand for information about the environment and its conservation.

This chapter offers new information about the area of

the different territories of which the Autonomous Region of Andalusia is made up, information that has been revised from a more precise cartographic base and with new techniques in the estimation of geographical demarcation.

Surface area and number of districts per province. 1999

Classification of the districts according to the surface area per province. 1999

	Almería	Cádiz	Córdoba	Granada	Huelva	Jaén	Málaga	Sevilla	Andalucía
Less than 30 km ²	30	6	12	64	14	6	37	30	199
From 30 to 49 km ²	20	5	7	26	14	19	21	13	125

Estadística de coberturas vegetales en Andalucía (Plant coverage statistics in Andalusia). Consejería de Medio Ambiente (Regional Government Department of Environment). These statistics are aimed at providing detailed and updated information on the use, the plant

coverage, the distribution and evolution of the land in Andalusia. Therefore, the plant coverage database, produced by digital treatment and subsequent interpretation of satellite images of the Andalusian community, has been exploited statistically at different spatial levels.

Estadística de repoblaciones y reconversiones forestales en Andalucía (Forest investment and reafforestation statistics of Andalusia). Consejería de Medio Ambiente (Regional Government Department of Environment). These statistics determine the reafforestation type of public and private woodlands and its costs, taking into account the following variables: reafforested hectares per species and reafforestation type in public and private woodlands, its total and unitary costs, and the distribution of costs of seeds, seedlings, machinery, labour force and other costs. Reafforestations are divided into mainly protective and mainly producing reafforestation.

years 1993-1999: Consejería de Medio Ambiente

Estadística de incendios forestales en Andalucía (Forest fire statistics of Andalusia). Consejería de Medio Ambiente (Regional Government Department of Environment). These activities are aimed at providing the necessary information to the Administration and to the forest sector about areas affected by forest fires in each province and in Andalusia as a whole. Therefore the following variables are analysed: number of forest disasters, attempts and forest fires, the surface area affected by the fire, causes of the forest fire, means and resources assigned to a forest fire, duration, starting times, etceteras.

Causes of forest fires in Andalusia. 1999 (*)

2 Population

The knowledge of population and its tendencies is an important starting point for the planning, resources allocation, and decision-making, particularly in the institutional field. In the same way, it is useful in the sphere of the private enterprise, regarding segmentation of markets and commercial strategies design.

This chapter includes the most basic and updated available information on Andalusian population: structure, natural movement of the population (NMP) and residential variations, that is, migratory movements from and to Andalusia.

Population density in Andalusia. 1998

Sex ratio of the population per province

	1996			Variation 1991-96	Total 1998	Variation 1996-98	Density 1998

Demographic census of Andalusia 1991. This census - like others - has the following basic objectives:

- To determine the population of the Autonomous Region of Andalusia, of every province, and of every district.

- To present figures about sex ratios, age groups, education levels, marital status, economic activity, migration, and other demographic characteristics.

- To provide the groundwork for the elaboration of other statistics and administrative operations.

Percentage distribution of the population by big age groups. 1996

Source: INE. Padrón Municipal de Habitantes de 1996

One of the special features of the 1991 census is the first to be exploited entirely by the Andalusian Institute of Statistics, which is the reason for its being called *Demographic census of Andalusia. 1991*.

Furthermore, and also for the first time, information has been exploited thoroughly and not by means of differently sized samples, as has been the case in former censuses. This census has been published in nine volumes,

one for each province and one for the whole region. The volumes of the different provinces all comprise the following eight subjects: district data, demographic structure, education, activity, territorial movement, female population, rate of marriage, fertility, ...; population in collectives and foreign population. Every provincial volume also includes a likewise structured section, which provides demographic data about the capital.

Local Census. INE. The Local Census is an administrative document in which all the residents of each municipal district must be registered.

Through the Local Census it is possible to know some demographic characteristics (age, sex, ...) of the inhabitants in each Spanish county. Like NMP statistics, the Local Census is a source of demographic data, which is obtained as a sub-product of administrative operations.

As an administrative document its objectives are

- Administrative functions:
 - The Town Councils planning.
 - The drawing up of the Electoral Census.

- It gives some rights to the population registered in, such as:

- Being included in the Electoral Census.
- Use of Public Services.
- To be admitted into the municipal schools, etceteras.

As an statistic document:

- Count of the population
- Knowledge of the population structure
- Reference framework for statistic works through surveys, etceteras.

INE.MNP. Datos de España

(1) Gross rates: We used as the average population of the year as the denominator, starting from the official figures on the 1st of January of 1998, and the estimated figures on the 1st of January of 1999.

(*) Provisional data

Birth Rate: (Births/population)*1000; **Mortality:** (Deaths/population)*1000; **Marriage Rate:** (Marriages/population)*1000; **Infant Mortality:** (Deaths of less than one-year-olds/number of births that year)*1000; **Natural Increase:** Gross birth rate minus gross mortality rate.

Movimiento Natural de la Población - MNP (Natural Movement of the Population - NMP). The NMP statistics refer basically to births, marriages, and deaths that happened in Spain. It is the classic statistical operation that has served to get to know better the population flows. The different NMP statistics collect the data from statistical bulletins completed in the moment these demographic facts are inscribed in the Registry Office.

There are various classification criteria regarding the three demographic issues, which make up the NMP. Thus, births are classified according to sex, place of birth, age of the parents, etceteras, whereas deaths are classified by age, and place and cause of the death. Finally, as for marriages, the age, the marital status, the occupation of the spouses, and others are considered.

(*) International migrations are not included
(1) Gross rates: The denominator is the average population of the year: Officiers data the 1 january 1998 and estimated data the 1 january 1999.

Migration balance: immigrants minus emigrants; **Immigration rate:** (immigrant/population)*1000;
Emigration rate: (emigrants/population)*1000; **Net rate:** immigration rate minus emigration rate.

Estadística de Variaciones Residenciales - EVR (Statistics of Residential Variations - SRV). The SRV is prepared with information about the migratory movements of the lists of inhabitants in the district and is meant to quantify the migration between different origins and destinations. Thus, migrations can be divided into distinct categories, of which

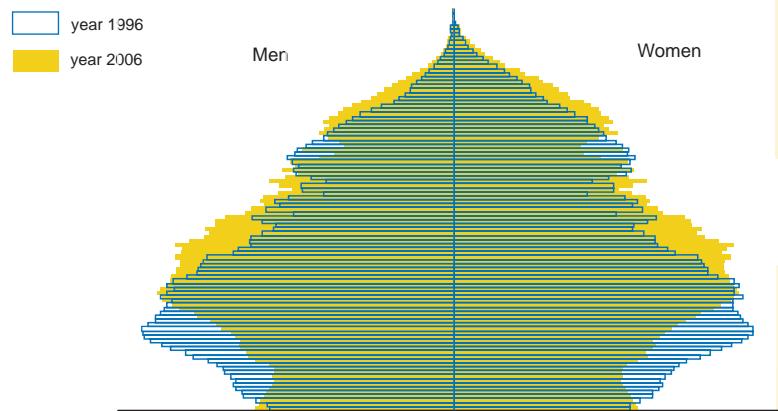

the most common is the difference between immigration and emigration, depending on whether the movement takes place within the country, or to or from a foreign country. Furthermore, data is grouped according to some criteria like sex, age, academic degree, etc.

3 Education and occupational training

Education constitutes, together with the family environment, one of the main elements in the socialisation of the individual. Its aim is to contribute to the physical, intellectual, and personal development of the individual. As a result of this, the situation of the educational system, its offers and resources, are of interest for most people: parents, pupils and teachers.

This chapter begins with a scheme of the educational system nowadays. It gives basic information about pupils, units and teachers in the different educational levels of regulated education and other fields of education (music, dancing, drama, foreign languages, and arts and crafts).

Censo de Población de Andalucía (Demographic Census of Andalusia). It facilitates information about the levels of education reached by the population, besides supplying data about people who were studying at the time the census was made.

Although this publication is extremely valuable because it provides general knowledge about the education level

of the population, it loses topicality because of its long ten-year frequency (the last census is the Demographic Census of Andalusia in 1991, carried out by the Andalusian Statistics Institute). This circumstance makes it advisable to look for other alternative statistical sources or institutions, which compile this type of information more frequently.

Consejería de Educación y Ciencia. Junta de Andalucía. (Regional Government Department of Education and Science. Regional Government of Andalusia.) By virtue of the article 19 of the Statute of the Andalusian Autonomy, "the regulation and administration of education to its full extent, including levels and degrees,

methods and specialities, within the limits of its powers", corresponds to the Autonomous Region of Andalusia. It is, therefore, the main source of whatever statistical information is needed about education and research in Andalusia.

4 Labour market

The structure and evolution of the labour market is of noteworthy interest for people. This has caused the realisation of many statistical activities that allow us to know in detail the labour situation in the society.

As stated below, this chapter offers a data selection

of the most relevant aspects: workers' earnings, labour costs, industrial accidents, carried out contracts, and others. They all reveal the situation of the labour market in Andalusia, as well as the employment evolution.

Active and working population. 1999 (thousands of persons) (*)

Encuesta de Población Activa (EPA) (Labour Force Survey). This survey, made by the Instituto Nacional de Estadística (INE, National Statistics Institute) since 1964, is not an exhaustive study but, as its name indicates, an investigation through survey. After various changes in the past, nowadays it is made every three months.

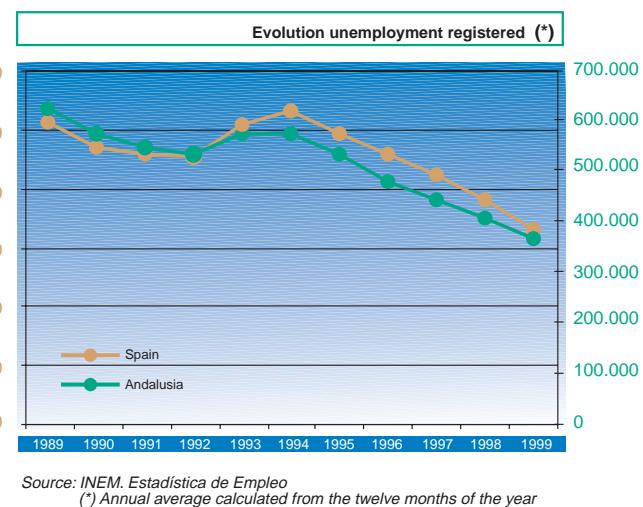

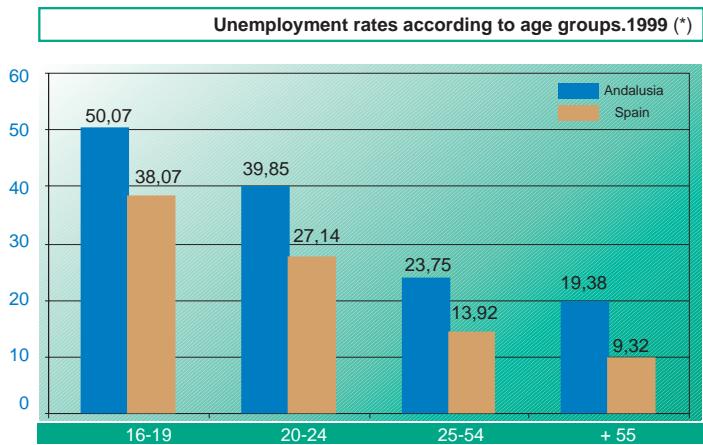

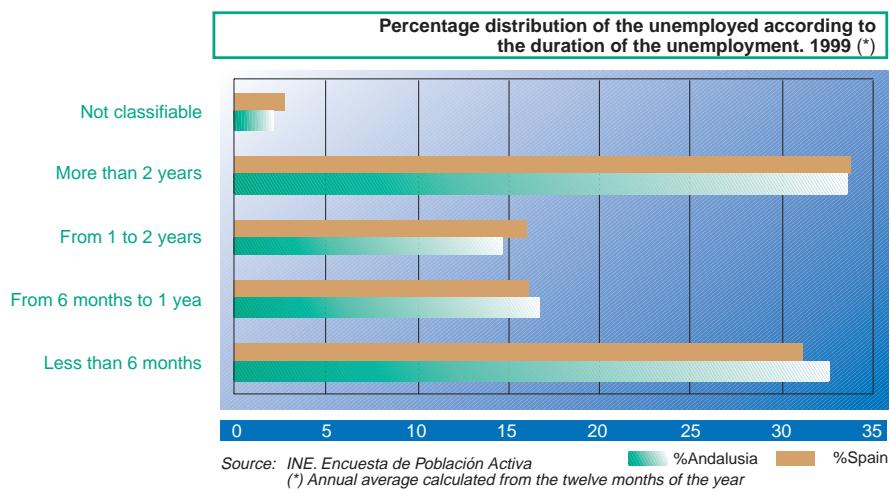

The main objective of this survey is to know more about the composition and evolution of the number of active, working, unemployed and inactive people according

to different classification criteria, such as sex, age, economical sector, profession, and other relevant aspects of the labour market. Furthermore, the same information according to the distinct spatial groupings – Spain, autonomous regions and counties- is available.

The survey is addressed to family housings, specifically 64,000 family accommodation units, which means approximately 200,000 persons.

(*) Annual average calculated from the twelve months of the year

Encuesta de Salarios en la Industria y los Servicios (**Wages in Industry and Service Sectors Survey**). At a national level and at the level of the autonomous region, this quarterly survey provides data about the levels and evolution of the worked hours per worker and month, the average earnings per hour, and average earnings per worker and month, according to the hours of work, the professional category, the type of activity, etceteras. Besides, for the 4th quarter of each year the survey provides this same information classified by sex.

Average earnings per worker and month in industry and service sectors. 4th term 1999 (pesetas) (including extra hours)

Employee: worker whose social security subscription group is from 1 to 7

- 1: Engineers and graduates
- 2: Technical engineers, technicians and skilled assistants
- 3: Chief clerks and foremen
- 4: Assistants without a degree
- 5: Non-administrative officials
- 6: Subordinates
- 7: Auxiliary clerks

Worker: worker whose subscription group is 8 to 11

- 8: First and second grade officials
- 9: Third grade officials and specialists
- 10: unskilled workmen
- 11: Workers under 18, independent of the professional category

Earnings: remuneration to be paid in cash or kind to workers. It includes the basic wage, extra pay, extra hours and arrears, but neither expense allowances nor indemnifications. All concepts are gross quantities.

Ordinary payments: Monthly payment, including extra pay if distributed proportionally.

Total payments: The sum of ordinary and extra pays and arrears.

Conversion into euro: 1 euro=166,386 pesetas.

Encuesta del Coste de la Mano de Obra (Cost of the Labour Force Survey). The Cost of the Labour Force Survey is a statistic operation with a quadrennial periodicity. It is carried out in the European Union framework with common criteria of methodology and contents in order to obtain comparable results about the level and structure of the labour cost.

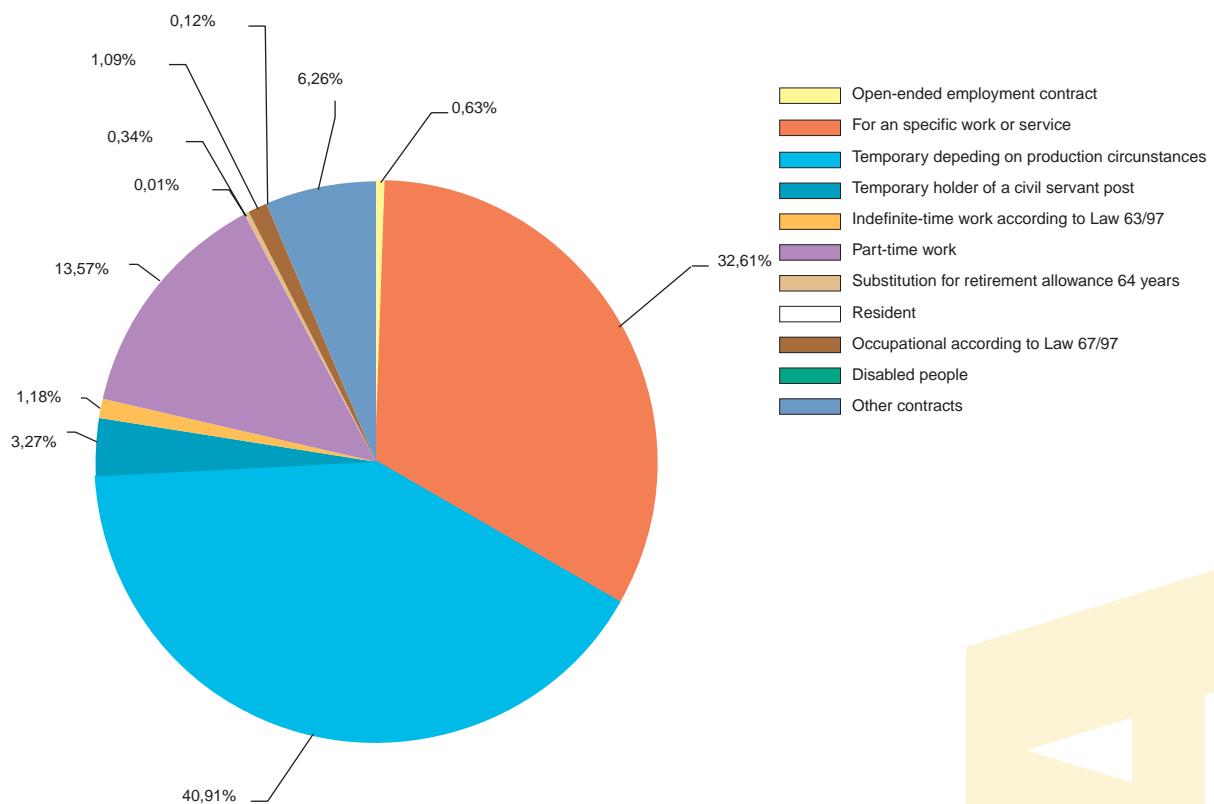

The statistical unit is the account of the Social Security contribution. This unit corresponds neither with the company nor the establishment or the working centre, though it coincides with the latter many times. The field of population includes all the accounts of Social Security contribution, which belong to companies with at least ten workers.

Medical resources and public health

Information on public health in Andalusia is necessary in order to evaluate the present situation and confirm the achieved advances. To evaluate and satisfy the possible needs of public health constitutes one of the main aims of health care systems in modern societies.

The available information in this chapter refers to

medical resources: health service establishments and staff, hospitals, beds...and to their distribution. It also refers to the way people use them through examinations, admissions, and stays in hospitals, and to the way public health is influenced by all this and by many other economical and social factors.

Health Resources and their Distribution. Statistics with information about health resources are provided basically by the Regional Government Department of Health and the Andalusian Health Service. These furnish information about health resources at two levels:

- Primary care corresponds to the first level of health care. It takes place in health centres, surgeries, and other

health establishments. It comprises preventive, curative, and rehabilitation care as well as health promotion. The information given in this area refers basically to public health centres and services, and constitutes the "Estadística de Actividad en los Distritos de Atención Primaria" (Statistics of activities in primary care districts), which was elaborated by the Andalusian Health Service.

• Specialised care offers diagnosis, treatment, and rehabilitation means that, because of their specialisation or characteristics, are not available at the level of primary health care. It includes State health-service hospitals, outpatient departments and hospitals. The information offered in this area may refer to either public or private centres, depending on the studied sources. Thus information is drawn from the "Catálogo de Hospitales de Andalucía" (Catalogue of hospitals in Andalusia), made by

the Consejería de Salud (Regional Government Department of Health), which includes basic characteristics of all the hospitals in Andalusia, may they be public or private. On the other hand, if the used source comes from the Andalusian Health Service (Estadística de Actividad Asistencial en Atención Especializada -Specialised health care statistics-), it provides more detailed information about hospitals belonging to the public network of the Andalusian Health Service.

(*) It exclusively refers to the public hospitals of the Andalusian Health Service

The Use of Health Resources. In this case the information may refer to both primary and specialised care to which it is possible to add the information provided by the "Estadística de Establecimientos Sanitarios en Régimen de Internado" (In-patient Health Care Establishments Statistics), elaborated by the Regional Government Department of Health, and the "Estadística sobre Datos Hospitalarios Básicos" (Hospital Basic Data Statistics) of the Andalusian Health Service. All these statistics, together with the already mentioned one, of specialised care in the

Andalusian Health Service, provide detailed information about hospital processes and also about the Register of Prior Appointments that supplies all data regarding the outpatient consultations.

Furthermore, other specific sources give information about pharmaceutical services and the use of certain centres and health services, as for example infant vaccinations, transplants, blood donation, termination of pregnancy, etceteras.

6 The primary sector

As in most advanced economies, the primary sector has given up its chief role to favour the other economic sectors in Andalusia. Nevertheless, the activity of this sector is still one of motive of its economic growth and of the exportations, as well as the mainstay of the food and

agriculture industry in Andalusia.

This chapter refers to information about the agricultural production, the cattle census, the quantity of caught fish and other related aspects. All this allows us to have a basic idea of the behaviour of this sector in Andalusia.

Number of farms, total surface area and area used for farming according to the extension. 1997 (*)

Source: INE. Encuesta sobre la Estructura de las Explotaciones Agrícolas.
(*) The size is given in hectares of SAU

Area used for farming (SAU). All the areas of cultivated land as well as of permanent pastures. Cultivated land includes herbaceous cultivation, fallow land, and that given over to the production of wood.

Farm. Economical and technical unit from which agrarian products are obtained under the responsibility of its owner. These economical and technical units are generally characterised by the use of the same means of production: labour force, machinery.

Farm with land. A farm of 0.1 hectares or more in one or several plots even if they are not adjacent

Encuesta sobre la estructura de las explotaciones agrarias. INE. (Structure of the Farms Survey. National Statistics Institute) Its objective is to know the current structure of the agricultural sector and its evolution in relation to earlier surveys and to the latest Agricultural Census (1989). It also fulfils the European Union demands for member countries to implement a programme of agricultural survey (one Agricultural Census between 1st of December 1988 and 1st of March 1991, and some sample surveys in 1993, 1995, and 1997).

The research is carried out throughout the nation and covers the farming season from October the 1st to September the 30th of the following year, which is considered the reference year. The national and autonomous regions results are published. They deal with the used agricultural area (farm size, crop type, tenancy system, livestock, irrigated land, family and paid labour,...) and with technical-economic orientation (economic extent, gross margin, main orientation,...).

Anuario de Estadísticas Agrarias y Pesqueras (Agrarian and Fishing Statistics Yearbook). This yearbook, published by the Regional Government Department of Agriculture and Fishing, is an abstract of statistics about the Andalusian agrarian and fishing sector for the year in question. Its main purpose is the structured spreading of interesting information regarding the agricultural, forest, cattle and fishing subsections in Andalusia. Most of the

information comes from the Departments of Statistics in the Provincial Offices of the Regional Government Department, though some is also obtained from the Provincial Offices of Fishing and Agriculture of the Regional Government Department as well as from the Andalusian Institute of Statistics and the National Statistics Institute.

The industrial sector

The level of industrial development, considering its power to invigorate the rest of the sectors, promotes the general economic activity and is indicative of its situation. The industrial sector is also the main support for foreign trade and economic productivity.

This chapter provides relevant data about the features

of Andalusian industry per branches, the industrial investments, the generated employment, and other aspects. In the same way, it also gives information about the evolution of the industrial sector, which is an important element in the study and valuation of its situation.

Source: IEA. Índice de Producción Industrial de Andalucía

Índice de Producción Industrial de Andalucía - IPIAN (**The Industrial Production Index of Andalusia**). The industrial production index of Andalusia, carried out by the Andalusian Institute of Statistics (IEA, Instituto de Estadística de Andalucía), is a trend indicator which aims at measuring the short-term evolution of the Gross Added Value of the Andalusian industrial sector every month.

The IPIAN is spatially applicable to the economical territory of the Autonomous Region of Andalusia. An

industrial activity is attached to this territory regardless of the legal form of the enterprise and of whether or not it is bound to organisations from other regions. A production unit may be identified as belonging to the industrial sector of the Autonomous region of Andalusia, when it maintains an establishment or permanent work centre in this region where some activities, integrated in the industrial sector, take place.

Main features of the Andalusian industry per activity branches. 1999

(*) Millions of pesetas

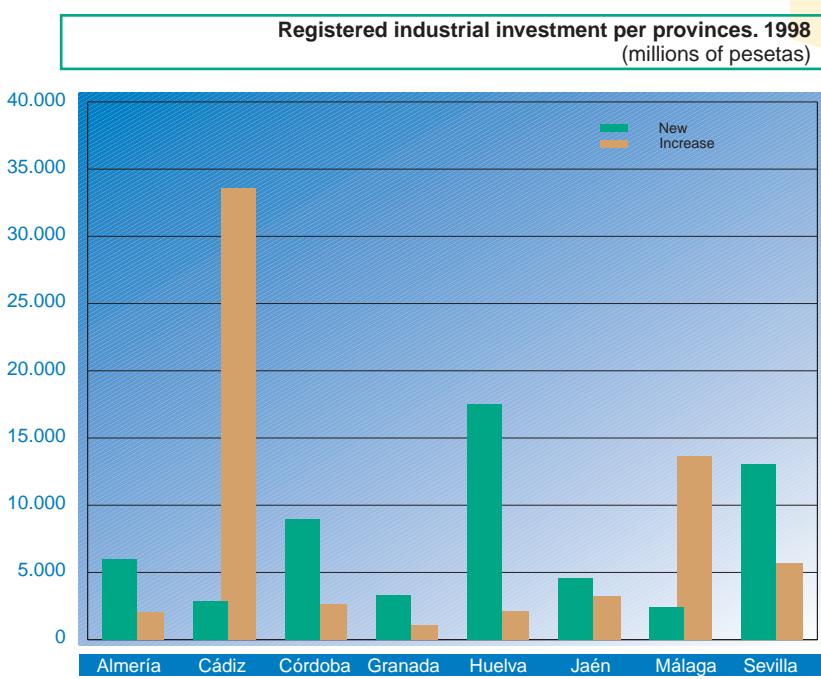

Conversion into euro: 1 euro = 166,386 pesetas

Encuesta Industrial de Empresas y Encuesta Industrial de Productos (Enterprises Industrial Survey and Products Industrial Survey). The Enterprises Industrial Survey and the Products Industrial Survey, continuation of the disappeared Industrial Survey, both made by the National Statistics Institute (INE), allow to analyse quite completely the activity in the industrial sector. In Andalusia, the Andalusian Institute of Statistics presents these publications with more details for the Autonomous Region.

These annual surveys aim basically at providing information about the main characteristics of the different sectors which make up the industrial activity of the economy, including the employment they generate as well as exploitation, investment, and production costs. In this way,

the national and international demand for information about this subject is satisfied.

Starting in 1993, the name of these publications was changed in order to be adapted to the Regulations PRODCOM (PROducción Comunitaria = COMmunity Production) – relating to the harmonisation of the characteristics of the industrial production in the countries of the European Union. These regulations follow the recommendations of Eurostat, the official European institution of statistics. Its main difference in relation to the former Industrial Survey is that now the survey unit for the Enterprises Industrial Survey is the enterprise and for the Products Industrial Survey is the establishment.

Town planning, housing and construction

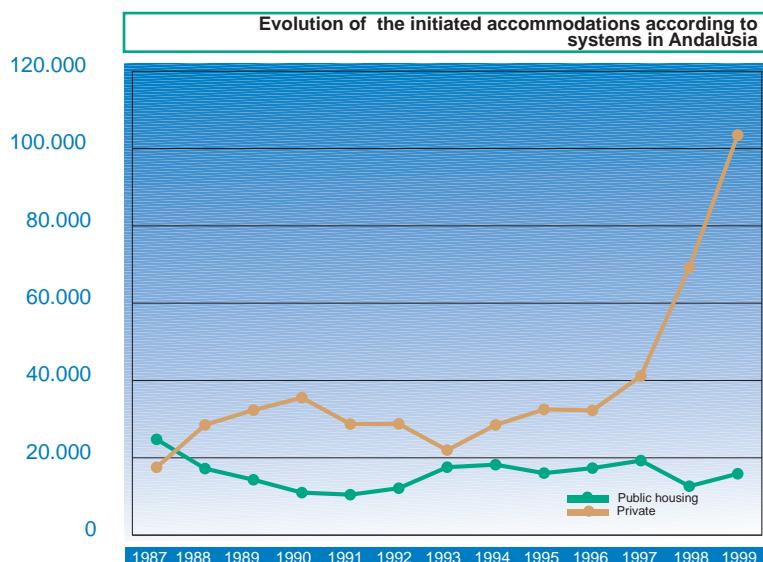

Designing the cities in order to make them places to live in, and satisfying a basic need of human being such as housing are essential objectives of the society that affect town planning and construction. They are so important that the public sector gives them a preferential position in their policy.

This chapter offers information about these three interrelated activities. It provides data about urban units and their land property value, housing types and systems, the evolution of public expenditure in building and infrastructure, and the activity that the existing establishments carry out in Andalusia.

Censo de Viviendas (Housing Census). This census comprises a set of operations designed to compile, summarise, evaluate, and publish the data relating to all the spaces allocated to human accommodation (family housing), and to enumerate those which are not conceived for this purpose but are used as such (permanent or mobile accommodations). The 1991 Census is the fifth of all

Housing Censuses. From 1950 to 1970, censuses were made in those years ending in zero with reference to the 31st of December. From 1981, they were made in those years ending in one in order to adjust to European Union standards. Furthermore, as it was quite difficult to collect the data the last day of the year, the reference date was changed onto the 1st of March.

Transport and communications

The level of the development reached in a society is reflected, to a great extent, in the transport activity and in the quality of the infrastructures that facilitate the communications. This is due to the fact that transport enhances the utility and the economic value of goods, as they are transferred to places where they are more needed,

and that the communications favour the interchanges in every field: commercial, social and cultural.

This chapter offers a selection of the information on both aspects. It details the types of roads, the road network density, the motor vehicle fleet, the passenger and cargo traffic or the telephone service in Andalusia.

Accidents with casualties: number of accidents that have occurred on public roads open to traffic or which originate on those roads, with one or several casualties and in which at least one vehicle was involved.

Dead: deceased as a consequence of an accident, whether the demise occurs instantly or within the following 30 days.

Anuario Estadístico (Statistical Yearbook). Dirección General de Tráfico (Public Department in charge of traffic). It presents a detailed analysis of the statistical data in the different concepts relating to vehicles, drivers, and reports,

which is complemented with the study of the evolution observed in each case for the past 10 years, establishing relationships with those factors that could influence those that are expressly object of analysis.

Evolution of the accidents with casualties (*)

Prices, trade and tourism

The trade and tourist activity in Andalusia becomes one of the most substantial sources of revenues within the service sector. In a great deal, it is the responsible of the tertiary level achieved by the Andalusian economy.

In this chapter significant information is given in order

to know closely the trade situation (establishments used for trade, number of registrations in the taxes on the economic activities, value of importation and exportation...) as well as the tourist activity (number and origin of tourists, hotel occupancy...) and the change in the prices.

Source : INE. Indice de precios al consumo

Indice de Precios al Consumo, IPC (Consumer Price Index. CPI). INE (National Statistics Institute). This index statistically measures the evolution of goods and service prices consumed by the population residing in family housings in Spain. In the Basic Consumer Price Index System 1992, the simple arithmetic average of the monthly indexes in the year in question,

calculated according to this System, has been equalled to 100. The Encuesta de Presupuestos Familiares, EPF (Family Budgets Survey), carried out between April the 1st 1990 and March the 31st 1991, provided basic information about household expenditures in consumer goods and services.

Employees: average number of the people that have participated in the economic activity of the establishment during the reference period of a year in return for cash, kind, or some profit-sharing of the enterprise.

Base de datos de actividad económica de Andalucía (Business Activity of Andalusia Database). This database was made by the Andalusian Statistics Institute (IEA) with the aim of presenting basic data about goods and service production centres existing in the Autonomous Region of Andalusia. It is a reference framework for census elaboration, samples, and data collecting surveys, as long as the studied units develop an economic activity.

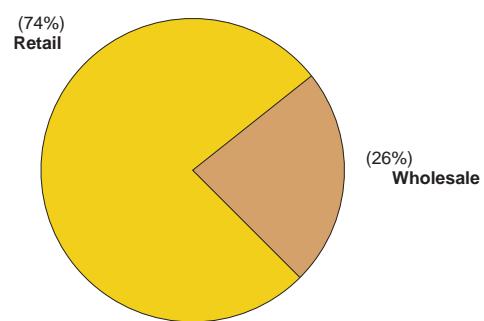

It consists of an organised whole of information, in magnetic medium, with identification, location, and classification data of the establishments according to the number of employees and the economic activity. This information is obtained from administrative sources and statistical files, in addition to other information from the IEA statistical operations.

Trade percentage distribution. 1999

Andalusia

Spain

Source: INE. Directorio Central de Empresas (DIRCE)

Directorio Central de Empresas, DIRCE (Business Central Directory). INE (National Institute of Statistics). Updated on the 1st of January of 1999, it is a source of information to analyse the registration, withdrawal and continuance of the enterprises, which is known as business demography.

It consists of an organised whole of information, in magnetic medium, with data about identification, location, territorial distribution, and classification of the companies

according to the number of employees and the economic activity. It is obtained from administrative sources and statistical files, and complemented with other data coming from normal statistical operations of the National Statistics Institute . Its main goals are to provide a framework for the design of sub-populations in order to elaborate surveys, and to provide an appropriate source for the elaboration of structural statistics on business.

Comercio Exterior de Andalucía (Andalusian Foreign Trade). Released by the Andalusian Statistics Institute , since 1990 this publication covers an important need within the economical statistics currently carried out in Andalusia. It contains information about imports and exports in this Autonomous Region, information that is obtained from the data provided by the Customs and

Special Taxation Department. Andalusian Foreign Trade with the EU countries only refers to commercial exchanges of goods and merchandise with foreign countries, since the lack of "regional customs" and its resulting administrative registration hinders commercial flows among autonomous regions from being known.

(2) Hotels, aparthotels, and guest houses.

Encuesta de ocupación hotelera (Hotel Occupancy Survey). It is an appropriate source to study the Tourism Sector, carried out annually by the Andalusian Statistics Institute . The National Statistics Institute also publishes the same survey, providing the data of the whole country. The information is obtained from the data collected every

month, by means of a survey, in the hotels of the Autonomous Region.

The general goal is to obtain the synthetic indicators that permit to evaluate the activity of the tourist sector and to make short-term predictions of the former activity.

Finance and business

It is extremely valuable to know about business and financial activities in order to define the behaviour of the private sector of any economy, and consequently, to draw conclusions about the general economic situation.

This chapter provides information about the evolution

of bank deposits and credits, mortgages, creation and dissolution of mercantile societies, employment rates in the companies, and suspensions of payments. They all are fundamental aspects in any financial and business activity in the society.

(*) Average of the values

Central de Balances de Actividades Empresariales de Andalucía. (Central of Balances of Andalusian Business Activities). Since 1990 the Spanish companies are obliged to deposit the annual accounts with the Business Register in the county where their registered office is placed, in order to make them public. The origin of this obligation is found in the Law 19/1989 on adaptation of mercantile legislation to the EEC directives as regards companies.

The data provided by the companies obliged to deposit the

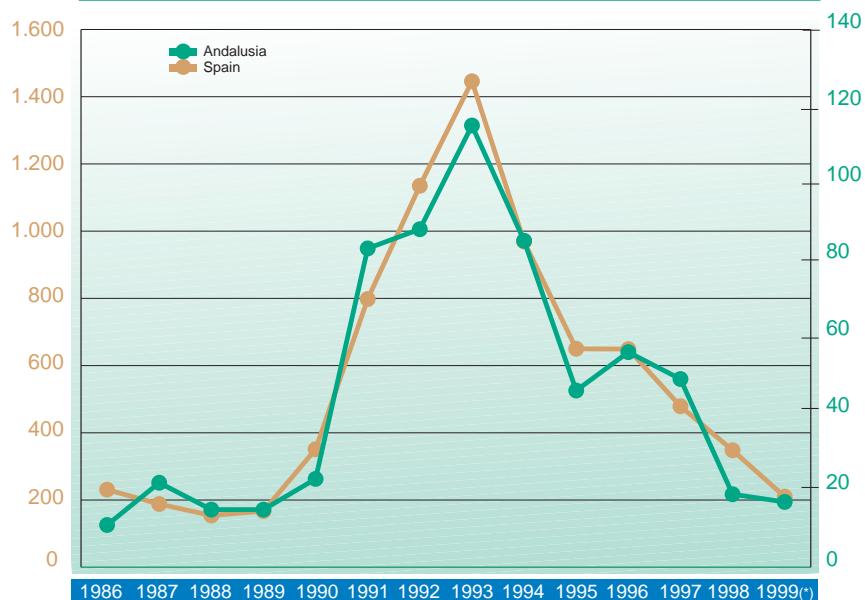

annual accounts with the Business Register permits different statistical uses. On the one hand, they serve as an informative base for the estimation of Andalusian economy macromagnitudes; on the other hand, the location and denomination data of these companies are used to update the directory of establishments and companies, and also the Central of Balances is useful for the carrying out of microeconomic and business researches.

Evolution of the Suspensions of Payments

Estadística de Declaraciones de Quiebras y Suspensiones de Pagos (Statistics of Bankruptcy Declarations and Suspensions of Payments). It compiles information about the number of suspensions of payments and bankruptcy declaration files started in Courts of First Instance within the Spanish territory. The number of suspensions of payments and bankruptcies is obtained per province and Autonomous Region, as well as the assets and liabilities of the relevant companies. They are also classified according to their economic activity and legal status, type of bankruptcy, reason for the suspension and payment proportion. The reference date is that of the opening of the file.

Source: Estadística de Declaraciones de Quiebra y Suspensiones de Pagos.
 (*) Provisional data

Suspensions of Payments: any trader or mercantile corporation can file for temporary receivership if they own enough assets to cover all their debts but foresee the impossibility to face them on the dates they expire, due to liquidity problems, scarce production or service demand, low productivity or other reasons.

Public administration accounts

The Budget is defined as an economic plan for public revenues and expenses that prevails during the financial year. According to this, the aim of the Budget is to achieve a rational and efficient use of public resources and to meet the social demands in the most suitable way.

Starting from a transparent assumption, public administration gives society all the necessary data in order to know the evolution of revenue and expenditure policy of all the administrative bodies in the Andalusian Autonomous Region.

As for the revenue, it is important to know their origin. Regarding expenses, a functional classification reflects the expenditure policy (i.e., the pursued aims) and an administrative classification provides an accurate idea of their structure.

Within the Andalusian Region framework, budget

statistics are provided by the Regional Government Department for Economy and Treasure. Within a national framework, it is the Ministry of Economy and Treasure, and within a European framework, the European Commission.

The social services and welfare programme

The knowledge of the most disadvantaged sectors in society is essential to define and apply suitable social measures and policies for the assignment of resources. These two factors have advantageous effects on those sectors which require a special intervention.

Next, we offer statistical data in order to inform about the different Andalusian welfare and care centres, which are at the disposal of the different groups. We also offer information about the number of fosterage and adoptions and about the social and financial assistance beneficiaries.

Fosterage: Protection measure, by which a minor is integrated temporarily into a family that is not the one constituted by his biological parents or guardian. A fostering family takes on the minor's custody without changing his paternal authority or guardianship.

Adoption: Legal protection measure, by means of which a minor is permanently integrated into a family, that is not his biological family, with the same consideration, rights and duties as legitimate children. The adopting family takes on all obligations arisen from paternal authority, and the ties between the minor and his biological parents are usually dissolved with only few exceptions.

Financial assistance beneficiaries per provinces. 1999

Tax-free retirement beneficiaries: People over 65, who lack enough income and live in Spanish territory for a specific period of time, have the right to obtain this pension.

Tax-free disability allowance beneficiaries: People over 18 and under 65, who lack enough income, are affected by any kind of disability or chronic illness equal or superior to 65%, and live in the Spanish territory for a specific period of time, have the right to obtain this pension.

L.I.S.M.I. (Law on Social Integration of Disabled People): Socio-financial assistance for the disabled.

F.A.S. (Welfare Fund): Old age or illness beneficiaries of the Social Work Fund.

Culture and leisure time

Due to the technological advances, people have more free time. Thus, they can devote this free time to culture and to the development of human knowledge and intellectual faculties. To know the activities that people choose in their free time is indispensable not only to suit people demands but also to encourage less usual activities.

This chapter offers data that reveal aspects related to culture. Not only in the use done in libraries, museums, archaeological or monumental places, or in less traditional places such as gambling rooms, but also in the supply through publishing production amount or popular shows.

(1) BPP closed for refurbishment.
(2) BPP closed from July to October the 4th for the move to new headquarters.

Estadística de Bibliotecas (Library Statistics). INE (National Institute of Statistics). Its main aim is to know both the number of libraries and service points in Spain as well as their funds and movements, equipment, staff, activities and expenses. The study has been carried out per type of library and per autonomous region and province.

This research is carried out every two years. The statistics include all libraries within the Spanish territory,

of any administrative dependence, except for those that are private and not open to the public. Information refers to the calendar year, although some features refer to the 31st December of the studied year.

The INE has been carrying out these statistics since 1960 but reorganised them in 1972 in order to adapt to the UNESCO recommendations, which emerged from the conference in 1970.

Social participation and justice

Among the different forms of social participation, the electoral one shows us the population's awareness about the importance of taking part in public life through their votes. From another point of view, the independent action of Justice Administration is the socially accepted way to protect the performance of duties and the respect for citizens' rights.

This chapter gives information about the electoral participation and other forms of participation such as

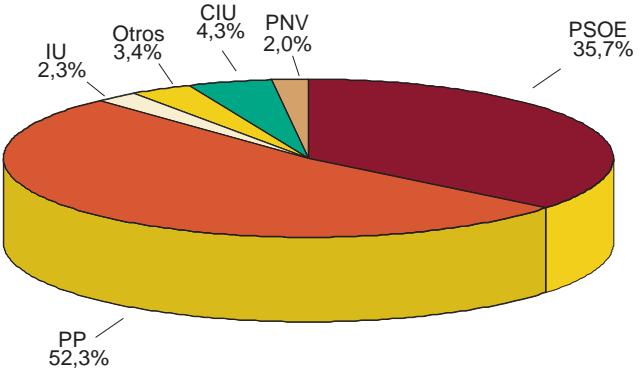

complaints to the Andalusian Ombudsman, which shows a concern in improving the Administration-Society relationship, or the way young people responsibly decide the way they will serve the society by doing military or social service .On the other hand, it provides data related to the Andalusian judicial activities, which occur in high courts, provincial courts and courts, and about the crimes or offences that are to be resolved.

Estadísticas Judiciales de España (Judicial Statistics of Spain). This publication, prepared by the National Statistics Institute, compiles annually, since 1959 and per provinces, the activities in the courts of different judicial nature, except social courts. The information refers to many different aspects: number of matters, judgements,

types of crimes or offences, imposed penalties, convicted people, etceteras.

Bulletins, which are completed by the courts monthly or every three or six months depending on circumstances, collect this information.

Great figures of the andalusian economy

The great figures of the Andalusian economy try to reflect the results of the economic activity of the different elements that participate in the Andalusian Autonomous Region from different approaches: demand, supply and generation of incomes.

This chapter refers to the evolution of the great regional figures (macroeconomic magnitudes): gross added value, income, consumption and saving. They all originate in the

Regional Accounts of Spain. On the other hand, it also offers data about the National Income in Spain and its distribution per provinces.

In the same way, this chapter includes the Andalusian macroeconomic chart concerning 1995. It shows the different constituents of the Gross Domestic Product at market prices from the three approaches aforementioned.

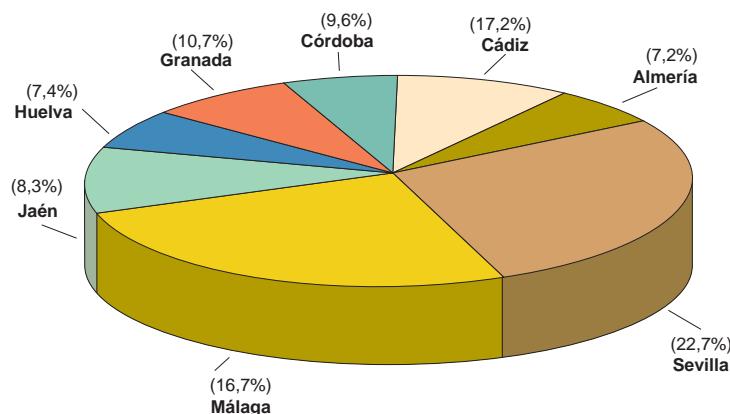

Evolution of the main macroeconomic magnitudes (millions of pesetas)

	1990	1991	1992	1993	1994(P)	1995(P)	1996(A)
Andalusia							
Gross added value (market prices)	6.441.904	7.091.334	7.483.795	7.739.578	8.211.245	8.729.685	9.203.939
Gross Disposable Income	4.807.757	5.328.258	5.806.793	6.124.959	6.430.662	6.963.554	..
Consumption	4.551.058	4.995.948	5.444.152	5.620.872	5.973.004	6.377.200	6.738.407
Savings	256.699	332.310	362.641	504.087	457.658	586.354	..
Spain							
Gross added value (market prices)	47.003.587	51.520.116	55.233.623	57.488.714	60.924.642	65.709.020	69.201.508
Gross Disposable Income	34.849.804	38.641.170	41.331.330	44.096.071	45.592.349	49.340.135	..
Consumption	31.303.377	34.268.769	37.277.131	38.481.942	40.723.656	43.331.814	45.669.457
Savings	3.546.427	4.372.401	4.054.199	5.614.129	4.868.693	6.008.321	..

(A): Advance data

Contabilidad Regional de España (Regional Accounting in Spain). This is a whole of operations, patterns, and tables, which aims at providing a systematic and comparable view of the economic activity in Spanish regions. The National Statistics Institute has elaborated

Regional Accounts since 1980. This publication is integrated into the European System of Accounts (SEC = Sistema Europeo de Cuentas) and uses definitions and standards established by the aforementioned system.

Sistema de Cuentas Económicas de Andalucía.
Marco Input-Output 1995 (System of Economic Accounts in Andalusia. Input-Output Framework 1995.) IEA. The 1995 Input-Output Framework is an statistic-accountant instrument. It states the whole operations of production and distribution, which occurred in the Andalusian economy during 1995. This work adopts the methodology in the new European System of Accounts (ESA-95).

The 1995 Input-Output Framework is useful for the

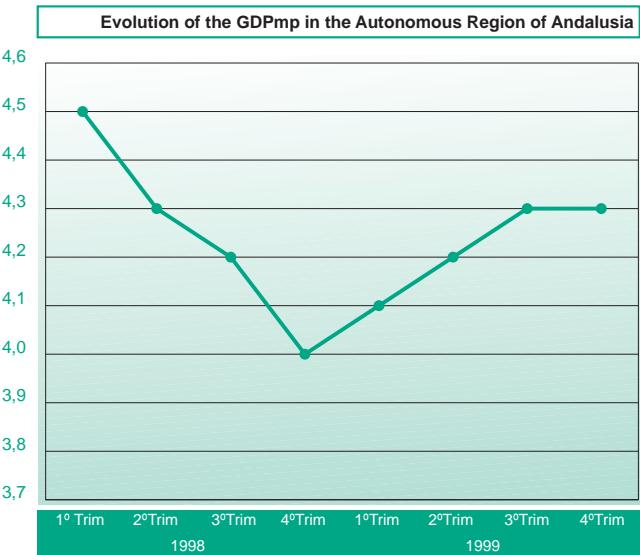

economic analysis as a resource of statistic information and as a solid pattern. It allows making economic predictions under certain conditions. Starting from the Input-Output Table, the Andalusian macroeconomic chart has been obtained. It shows the valuation of the Gross Domestic Product (GDP) at market prices by the three ways, (demand-supply-income) according to the following scheme:

Andalusian macroeconomic chart. 1995 (millions of pesetas)

	Millions pesetas	%
Demand		
Final domestic consumption expenditure	8.960.719	90,07%
Individual domestic consumption expenditure	6.942.042	69,78%
Expenditure in the individual consumption of public administrations and non-profitmaking institutions at the service of home life	1.351.683	13,59%
Colective consumption expenditure	666.994	6,70%
Gross capital formation	2.639.736	26,53%
National demand	11.600.455	116,60%
Foreign balance	-1.651.947	-16,60%
Good and service exportation (FOB)	2.998.442	30,14%
Good and service importation (CIF)	4.650.389	46,74%
Gross domestic product at market prices	9.948.508	100,00%
Supply		
Total gross added value at basic prices	9.301.320	93,49%
Gross added value of the primary sector branches at basic prices	719.890	7,24%
Gross added value of the industrial branches at basic prices	1.469.836	14,77%
Gross added value of the construction at basic prices	827.409	8,32%
Gross added value of the service sector branches at basic prices	6.284.185	63,17%
Finantial mediation service indirectly measured	-396.113	-3,98%
Net taxes on products	1.043.301	10,49%
Net taxes on products VAT excluded	203.461	2,05%
VAT	839.840	8,44%
Gross Domestic Product at market prices	9.948.508	100,00%
Income		
Remuneration of wage earners	4.309.684	43,32%
Gross exploitation surplus	3.364.916	33,82%
Mixed incomes	1.169.605	11,76%
Net taxes on production and importation	1.104.303	11,10%
Net taxes on products	1.043.301	10,49%
Other net taxes on production	61.002	0,61%
Gross Domestic Product at market prices	9.948.508	100,00%
Non-residents' consumption in the economic territory	798.257	
Residents' consumption in the rest of the world	129.996	

Source: Sistema de Cuentas Económicas de Andalucía. Marco Input-Output 1995
Conversion into euro: 1 euro=166,386 ptas.

GD_{mp} = GAV at basic prices + services of financial mediation indirectly measured (SFIIM) + net taxes on production VAT excluded + value-added tax (VAT) = remuneration of wage earners (RW) + gross exploitation surplus (GES) + mixed incomes (MI) + net taxes on production + other net taxes on production = Final consumption expenditure (individual domestic consumption expenditure + expenditure in the individual consumption of public administrations and non - profitmaking institutions at the service of home life + colective consumption expenditure) + gross capital formation (GCF) + good and service exportation at market prices (FOB) - good and service importation at market prices (CIF)
