1 Territory and environment

This chapter offers a selection of tables presenting features relating to territory, such as total area, land cover and land use, and the environment, providing

data on quality and protection policies of natural areas, their characteristics and conservation status.

1.1. Total area and number of municipalities by province. 2006

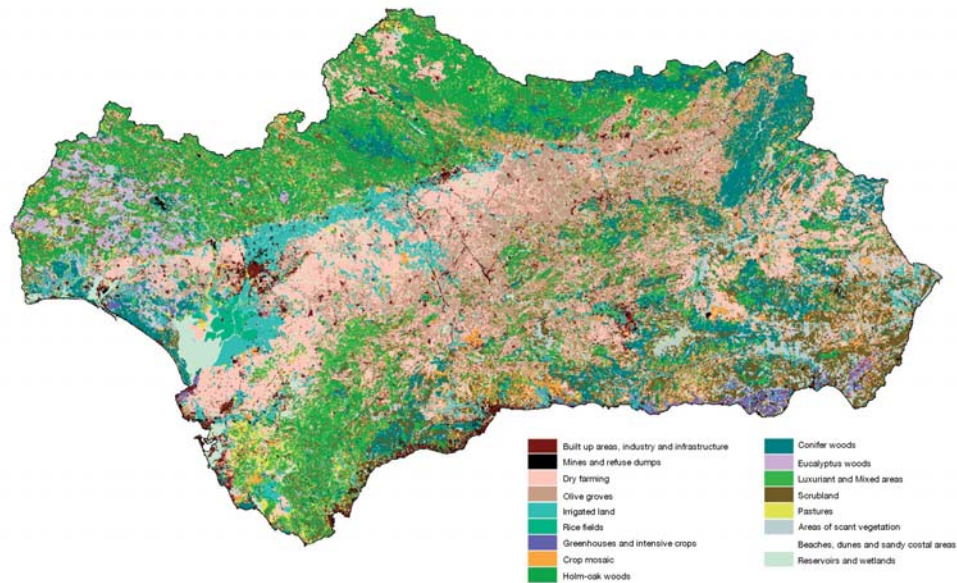

SOURCE: IEA. Multi-territorial Information System of Andalusia (SIMA)

1.2. Municipalities according to total area by province. 2006

	Almería	Cádiz	Córdoba	Granada	Huelva	Jaén	Málaga	Sevilla	Andalusia
Less than 30 sq km	30	6	12	64	14	6	37	30	199
From 30 to 49sq km	20	5	7	26	14	19	21	13	125
From 50 to 99 sq km	31	12	13	46	16	24	20	20	182
From 100 to 199 sq km	8	10	21	19	17	29	19	20	143
From 200 to 499 sq km	12	9	16	11	17	17	2	18	102
500 sq km and over	1	2	6	2	1	2	1	4	19
Total	102	44	75	168	79	97	100	105	770

SOURCE: Regional Government Ministry of Public Works and Transport. Cartographic Institute of Andalusia

1.3. Land cover and land use in Andalusia. 2003*

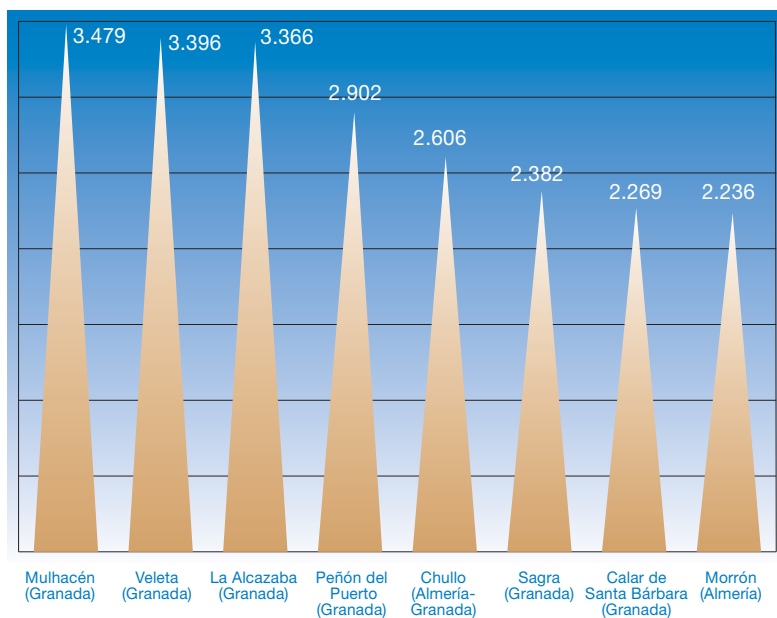

SOURCE: Regional Government Ministry of the Environment

*Information drawn from the cartographic analysis at scale of 1:25.000.

Land cover and land use statistics in Andalusia. Regional Government Ministry of the Environment. It is aimed at having detailed, updated information on land cover and land use in Andalusia, their distribution and evolution. To this

end the land cover database obtained from the digital satellite imagery of the Autonomous Community and its subsequent analysis is exploited statistically at different spatial levels.

1.4. Mountain peaks of Andalusia* (metres)

SOURCE: National Geographic Institute. National Atlas of Spain

*The peaks have been chosen because they visually dominate their surroundings, but are not necessarily the highest.

1.5. Average water demand according to basin by use and water balance. 2006

	Use (percentage)				Final balance (hm ³ /year)		
	Urban	Industrial	Agricultural	Others	Demand	Resources	Balance
Cuenca							
Guadalquivir	11,7	1,6	80,3	6,4	3.578	3.362	-216
Mediterránea Andaluza	18,0	2,3	77,7	2,0	1.377	1.220	-157

Guadiana	31,3	6,3	62,5	-	16	12	-4
Segura	10,6	-	89,4	-	47	6	-41
Total	14,5	2,8	77,6	5,2	5.661	5.426	-235

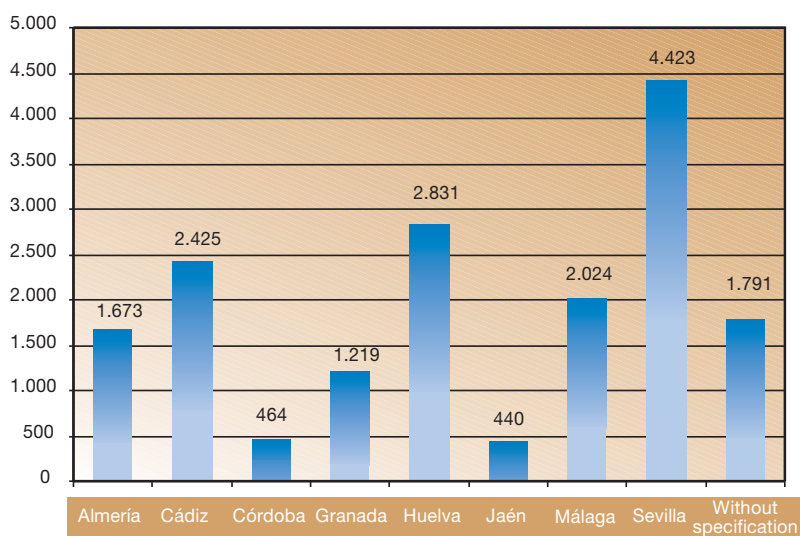

SOURCE: Regional Government Ministry of the Environment

Reforestation statistics in Andalusia. Regional Government Ministry of the Environment. This establishes the type of reforestation, total area reforested and its costs on public and private mountains studying the following variables: hectares reforested by specie and type

of reforestation on public and private mountains, total and unitary costs and the distribution costs in seeds, seedlings, machinery, labour and others. Reforestations are considered according to their productive and protective functions.

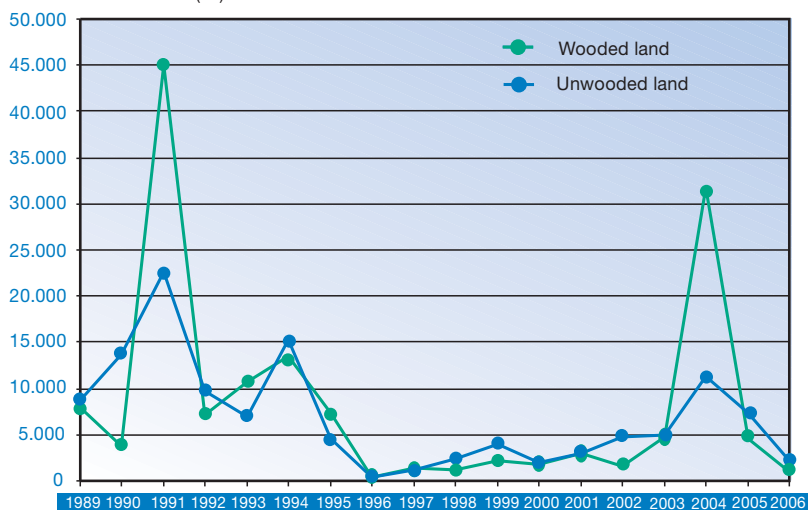

1.6. Area reforested in reforestation activities by province. 2006

(ha)

SOURCE: Regional Government Ministry of the Environment. Support System for Monitoring Files and Activities

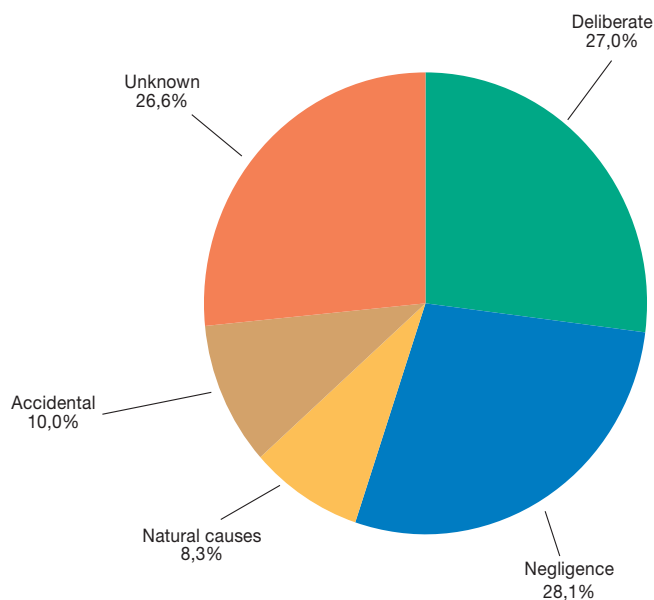

1.7. Evolution of the area burned according to type in Andalusia. 1989-2006 (ha)

SOURCES: 1989-1992: Regional Government Ministry of Agriculture and Fisheries
1993-2006: Regional Government Ministry of the Environment

Forest fire statistics in Andalusia. Regional Government Ministry of the Environment. The goal of this activity is to respond to the Administration and forestry sector's information requirements on the area affected by forest fires in each province and in Andalusia as a whole. For that reason, the following variables are analysed: number of fire incidents, potential fire situations and forest fires, areas affected by the fire; causes; means and resources assigned to the fire; duration; time of onset; etc.

1.8. Distribution of forest fires by cause in Andalusia. 2006
(percentage)

SOURCE: Regional Government Ministry of the Environment

1.9. Rainfall in Andalusia. 2006
(L/m²)

*Unacceptable levels of atmospheric pollutants are considered all those classified as bad or very bad according to the 1073/2002 Royal Decree criterion. They are:

SO₂: to calculate the index the 24 hours limit value (daily average over 125 µg/m³) set out in the Directive 1999/30 is considered. However if the 1 h limit value (470 µg/m³) laid down in the same directive is exceeded, the air quality will be considered "bad" and "very bad" when the alert threshold (value for 3 consecutive hours higher than 500 µg/m³ is exceeded)

Suspended particles: to calculate the index the 24 hours limit value (daily average over 70 µg/m³) set out in the Directive 1999/30 is considered.

NO₂: to calculate the index the hourly limit value (290 µg/m³) set out in the Directive 1999/30 is considered. When the alert threshold (value for 3 consecutive hours higher than 400 µg/m³) is exceeded the air quality will be considered "very bad"

Ozone: to calculate the index the objective value for the protection of health laid down by the new Directive (eight hour value of 20 µg/m³) is considered. When the value of information to the public (hourly value of 180 µg/m³) is exceeded the air quality will be considered "bad" and "very bad" when the alert threshold for the population (hourly value of 240 µg/m³) is exceeded.

IEA. Multi-territorial Information System of Andalusia

Andalusian Population Census 2001. The Population Census is a statistical source of doubtless interest for a greater demographic comprehension of the Spanish and, in particular, the Andalusian population. The census is taken every ten years, and establishing the number of inhabitants in each

territorial area and recognizing their specific demographic, cultural, economic and social features are among its main goals. It furnishes a structural representation of the population that serves the Administration and numerous users as a basis for decision-making and research.

2.3. Population according to gender and age groups by province. 2006 (percentage)

SOURCE: INE. Revision of the Municipal Register of Inhabitants on 1st January 2006

The last available census was taken with reference to the 1st November 2001. For the first time in the history of Census taking, personalised questionnaires were used making the most of the information in the Municipal Register of Inhabitants.

In Andalusia, the Institute of Statistics of Andalusia (IEA) participated thanks to a collaboration agreement with the National Institute of Statistics (INE) in the elaboration of this census, as in the previous one of 1991.

2.4. Population pyramid of Andalusia. 1991 and 2006 (relative population per 1.000)

SOURCES: INE-IEA. Census 1991
INE. Revision of the Municipal Register of Inhabitants on 1st January 2006

Municipal Register of Inhabitants (MRI).

The MRI is the roll of inhabitants of each municipality, which includes name, surnames and address that must be permanently updated. It is, therefore, an administrative register, but also has a statistical use as it provides a population count and information on important demographic variables, such as gender and age.

The MRI was corrected annually (these were the so called census corrections) and it was completely renewed every five years (the so called

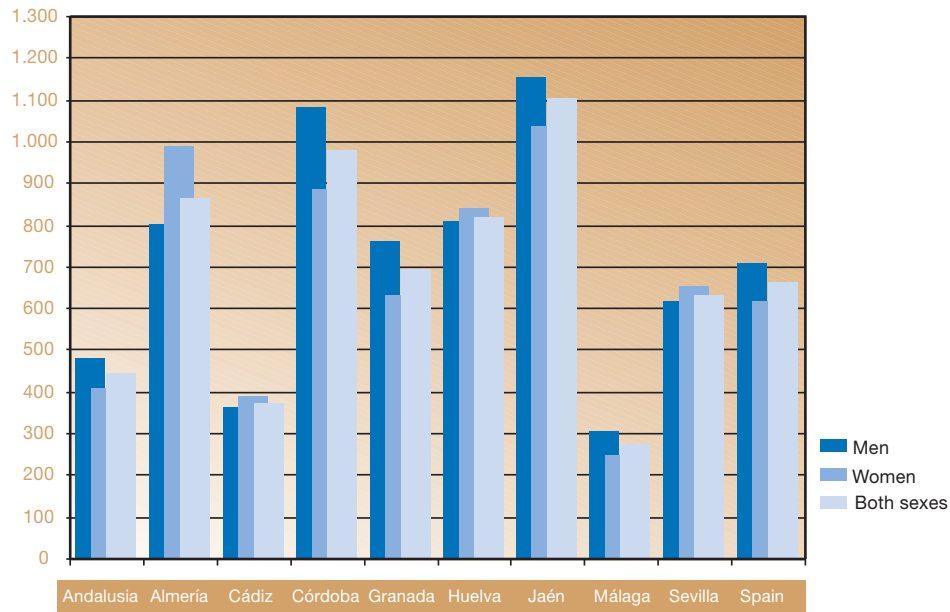

census renewals) until the Law 4/1996 of 10 January came into effect, amending the law 7/1985 of 2 April, regulating the Bases of the Local Regime in connection with the Municipal Register. From this law, a continuous register through the coordination and collation of the registers of all the municipalities was implemented; in this way, the census revisions are obtained on 1st of January of every year. The INE is the organism responsible for this task.

^aEvents by province of residence.

^bGross rates. The average population estimates in the year has been used as denominator.

Births: (Births/Population)*1.000. **Deaths:** (Deaths/Population)*1.000. **Marriages:** (Marriages/Population)*1.000. **Infant Mortality:** (Deaths between 0 and 1 year old/live births)*1.000. **Natural growth:** Difference between births and deaths.

Vital Statistics (VS). VS refer to births, marriages and deaths that take place in the Spanish territory. It is a statistical operation aimed at improving information on population flows. Civil Registers are the primary source of information. They send monthly bulletins of childbirths, marriages and deaths to the delegations of the INE. These bulletins are filled in on registering these demographic events in Civil Registers.

The classification criteria of the three demographic events that integrate VS are multiple. Thus, births are

tabulated according to gender, birthplace, parents' age, etc. Likewise, deaths are classified according to age, place and cause of death. Finally, for marriages, age, marital status, profession of the spouses etc, are taken into account. Information on same-sex marriages is gathered after the law 13/2005, of July 1, which modifies the Civil Code regarding the right to get married, comes into force.

2.8. Total Fertility Rate. Period 1986-2005

	Andalusia	Alemania	Francia	Italia	Suecia	Spain
1986	1,89	1,37	1,81	1,42	1,74	1,56

SOURCE: IEA. Residential Variations Statistics in Andalusia.

^aInternational migrations have not been included.

^bThe average population estimates in the year have been used as denominator.

Migratory Balance: Immigrations minus Emigrations. **Immigration Rate:** (Immigrations/Population)*1.000. **Emigration Rate:** (Emigration/Population)*1.000. **Net Rate:** Immigration rate minus Emigration rate.

Residential Variations Statistics (RVS). The RVS is elaborated from the exploitation of registrations and cancellations in the municipal registers brought about by changes of residence. It is used to quantify the migratory flows that take place between different origin and destination points. It allows migratory classification under diverse categories; the best known

is that which differentiates between domestic and international migrations according to whether the displacements occur within the country or between the country and abroad. Furthermore, the data are facilitated based on different criteria, such as gender, age group, academic qualification, etc.

2.12. Population pyramid of Andalusia. 2006 and 2025 (relative population per 1.000)

The aim of the elaboration of population projections by statistical institutes is long and short term estimates, with several possible scenarios for the future evolution of the population based on likely hypothesis. These revisions facilitate planning and public management in diverse fields (health, education, etc.) as well as dealing with the statistical requirements for the elaboration of demographic and social indicators.

3 Education

This chapter offers basic statistical information relating to the pupils, units and teaching staff of the diverse educative levels of regulated education (Nursery, Primary, Special Education, Adult Education, GCSE, GNVQ, Formative Cycles, University) and specialist education (Music, Dance, Dramatic Art, Languages, Applied Arts).

* Common subjects with Bachillerato

Furthermore it includes data on university students enrolled and graduates according to branch, scholarships and study aids, as well as on

the education budget and its distribution in diverse budgetary programs. The data refer to the school year 2005-2006, the latest information available.

^aIncludes Special Education pupils in substitute classroom in Infant/Primary schools and pupils in Specific Special Education centres.

^bIncludes Special Education pupils integrated in the education levels (Infant, Primary and Secondary). These pupils have already been taken into account in all the aforementioned education levels.

The Regional Government Ministry of Education of the Junta of Andalusia is the main statistical source of information in non-university education and the **Regional Ministry of Innovation, Science and Business** elaborates the statistical information on university education and research in Andalusia.

Through these statistical activities it is possible to know, among others, data on the structure, resources, demand and effectiveness of the education system in Andalusia as shown in the following tables.

Unemployment rate: (Unemployed/ Economically Active)*100.

Labour Force Survey (LFS). INE. Elaborated by the National Institute of Statistics (INE) since 1964, it is a quarterly sample survey and not an exhaustive study.

Its purpose is to provide information on the labour market: composition and evolution of the number of economically active, employed, unemployed and inactive persons according to different classification criteria, such as gender, age, economic sector, profession and other relevant aspects. At the same time, this information is available by different levels of spatial aggregation: national, autonomous community and province.

The survey is focused on the population living in main households; it has an initial sample size of

65.000 families a quarter, implying coverage of approximately 200.000 people.

In 2005 the LFS was modified for various reasons:

- Adaptation to the new demographic and labour reality, due especially to the rise in the number of resident foreigners.

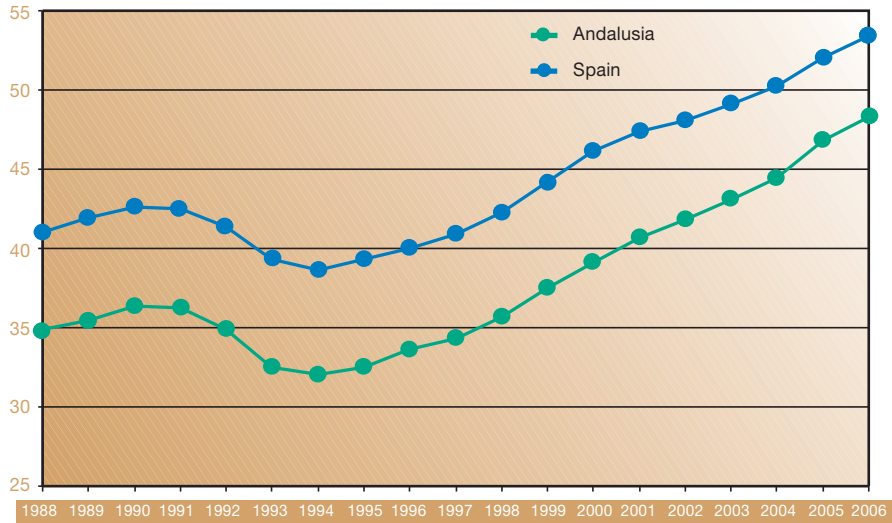

- New Eurostat regulations.

- Improvements in data collection methods.

The implementation of these modifications generates changes in the population series(1). The INE web site offers detailed information on these changes, their repercussions, as well as retrospective data.

(1) The series published here are only affected by the first of these causes.

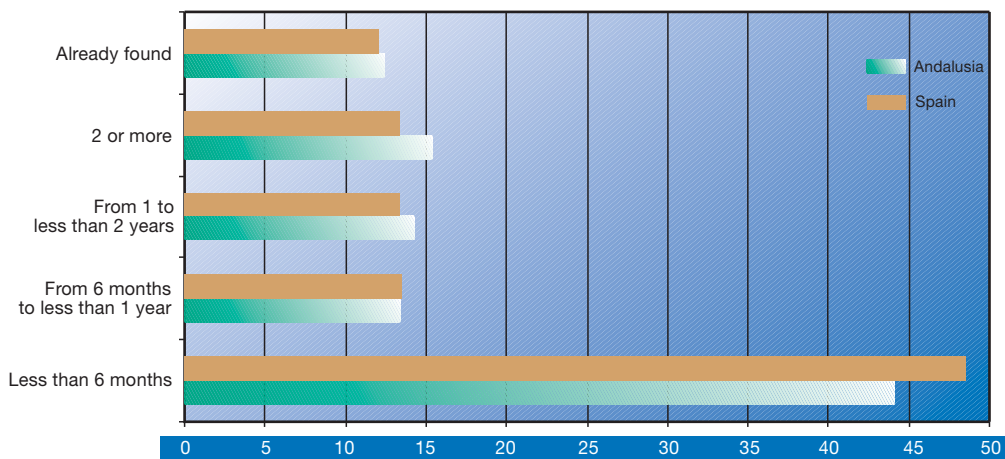

4.3. Evolution of employment rates. 1988-2006*

SOURCE: INE. Economically Active Population Survey

*Rates calculated with the average annual employed population and population of 16 and over from the four quarters of the year.

*Includes those not classifiable by gender.

Quarterly Labour Costs Survey (QLCS). INE.

This is a continuous quarterly statistical operation, elaborated by the INE, a component part of the euro indicators that Eurostat has requested of the EU Member States to measure the convergence in labour costs. It aims to provide information on average labour costs per worker and month, as well as on hour worked. This survey enables the time worked and not worked to be monitored obtaining estimates of the average workday.

The population scope is made up of all salaried workers with contributions to social insurance schemes, regardless of their size, included in the General Regime of the Social Security and in the Special Regime for Coal Mining.

Until the 4th quarter of 2003 this survey was denominated Labour Cost Index (LCI). From the 1st quarter of 2004 it became the Quarterly Labour Cost Survey (QLCS).

4.9. Labour and wage costs per worker and month according to the activity sector. 2006 *

^aNumber of beds in each hospital on the 31st December and which are ready to be used, although some of them may, for different motives, not be in service on that date.

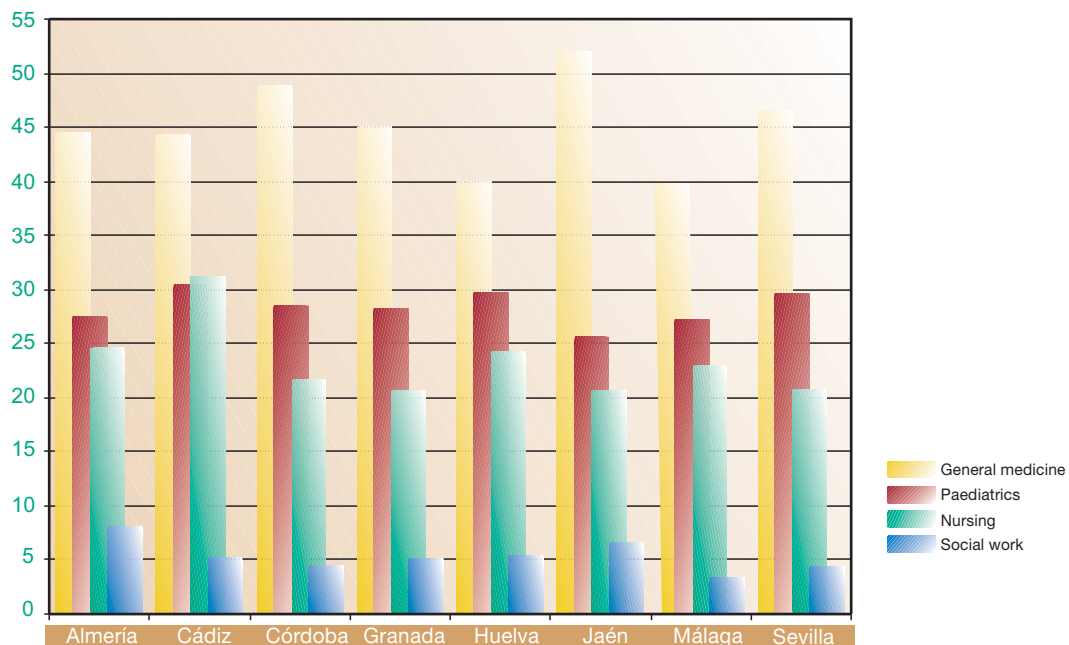

^bThe reference population corresponds to the revision of the Municipal Register of Inhabitants on 1st January 2006.

Health care resources and their distribution. The statistics that provide information on health care resources come fundamentally from the Regional Government Ministry of Health and the Andalusian Health Service, contributing information on two levels:

- Primary Care: it is the first level of health care carried out in health centres, doctor's surgeries and other centres. Primary care integrates preventive,

curative, and rehabilitation care and health promotion. The information offered in this area refers mainly to public centres and services and makes up the Statistics on Primary Care Activity of Andalusia, compiled by the Andalusian Health Service. Its main source of information is the Information System for the Management of Primary Care.

5.4. Consultations in primary care centres according to professional group by province. 2005* (daily average per professional)

SOURCE: Andalusian Health Service. Information System for Primary Care Management

*On demand and programmed consultations in primary care centres have been included. House calls have not been included

• **Specialist Care:** it offers the means for diagnosis, treatment and rehabilitation that, for their specialisation or characteristics, cannot be solved at primary care level; it includes clinics, outpatient departments and hospitals. The information gathered in this area may refer to public as well as private centres, depending on the source studied. Thus, the Catalogue of Andalusian Hospitals, elaborated by the Regional Government Ministry of Health,

offers information on the resources and establishments with inpatient regime, both public and private, of the Andalusian hospital network. On the other hand, if the source employed comes from the Andalusian Health Service (Statistics on Specialist Care Activity of Andalusia), more detailed information on hospitals that make up the public network is provided.

5.5. Admissions and stays in Andalusian Health Service hospitals according to service by province. 2005

Utilisation of health care resources. The information herein refers to primary or specialist care to which it is possible to add the information supplied by the Statistics on Health Establishments Providing Inpatient Care of Andalusia, elaborated by the Regional Government Ministry of Health as well as by the Statistics on Basic Hospital Data of Andalusia, exploitation of the information provided in the Minimum Basic Data Set on Hospital Discharges of the Andalusian Health Service

These statistical activities, together with the abovementioned Statistics on Specialist Care Activity

of Andalusia of the Andalusian Health Service offer detailed information on the entire hospital process, as well as data relating to the activities carried out in non-structured surgeries in external outpatient clinics compiled by the information system of the appointment system.

Furthermore, other specific sources provide information on pharmaceutical benefits and the utilisation of specific centres and health care services whether in infant vaccinations, organ transplants, blood donation, abortions, etc.

5.6. Evolution of the number of registered cases of Notifiable Diseases in Andalusia^a. 1998-2006

Public health status. Health status information is founded on data on the diseases the population suffers making up a set of statistics elaborated by the Regional Government Ministry of Health: Tuberculosis, AIDS or Notifiable Diseases (ND) Statistics. On the other hand, the Institute of Statistics

of Andalusia and the Regional Government Ministry of Health provide through the statistics obtained from the Vital Statistics unit, information on mortality and causes of death that may be accessed.

SOURCE: INE. Farm Structure Survey

*The size of the farm is expressed in ha of area used for farming

Area Used for Farming (AUF): Area of farmland and land for permanent grazing. Farmlands include herbaceous crops, fallow land, family allotments and lands given over to woody crops.

Farm: technical economic unit from which agricultural products are obtained under the responsibility of the holder. This unit is characterised, generally, for the use in common of labour and means of production: machinery, land, etc.

Farm with land: farm whose total area is 0.1 ha or over in one or several plots, although they are not adjacent.

Farm structure survey 2005. INE.

Its essential purpose is to evaluate the Spanish agriculture situation and to follow the structural evolution of the farms as well as to obtain comparable results among all the Member States of the European Union.

The research is carried out in the whole national territory, and refers to the agricultural campaign of October 1st 2004 to September 30th 2005,

considered the reference year. Publishing national and autonomous community results on area used for farming (farm size, crop type, holding regime, livestock, irrigated land, family and salaried work...) and on technical-economic features (economic dimension, gross profit, main tendency ...) Overall this new survey upholds the framework of the last censuses and surveys to facilitate the study of the agricultural evolution and data comparability.

6.2. Production of the main crops by province. 2006*

Agrarian and Fisheries Statistical Yearbook. Regional Government Ministry of Agriculture and Fisheries. It is a compendium of Andalusian agrarian and fisheries sector statistics for the reference year. Its main goal is the structured dissemination of information of interest relating to the agricultural, forestry, livestock and fishing sub-sectors in Andalusia. Statistical operations included

in the Statistical Plan and Program, elaborated by the Departments of Studies and Statistics of the Provincial Delegations of the Regional Government Ministry and by the Service of Studies and Statistics of the State Office of Agriculture and Livestock, are the main data sources although other data comes from the Institute of Statistics of Andalusia and the National Institute of Statistics.

7 Industrial sector

This chapter provides significant data on the characteristics of Andalusian industry by branch, industrial investment, employment generated and other features, as well as on the evolution of the industrial sector.

7.1. Evolution of the industrial production index in Andalusia according to the economic destination of goods. 1990-2006* (average 2002 = 100)

SOURCE: IEA. Industrial Production Index of Andalusia

*Advance data.

Industrial Production Index of Andalusia (IPIAN). IEA. The object of the IPIAN is to indicate the monthly evolution experienced by the fraction of the Gross Value Added (GVA) originated in the industrial sector with regard to a previous period denominated base period.

The implementation scope of the IPIAN is the economic sector of the Autonomous Community of Andalusia.

To determine the indicator base period, an attempt to use a prices and production regime

similar to regular situations has been made. The selected year is 2002, which is not very remote and since when no extraordinary events have modified the production regime.

The selected reference period has been 2000, as all the necessary information to calculate the coefficients, obtained by means of the Input-Output Chart of Andalusia was available.

Industrial Survey of Companies and Industrial Survey of Products. INE. These surveys are a follow up of the no longer existing Industrial Survey and make a full analysis of the activity of the industrial sector possible. In Andalusia, the IEA presents the same publications in greater detail for the Autonomous Community named *Annual Industrial Survey of Companies. Data for Andalusia* and *Annual Industrial Survey of Products. Data for Andalusia*.

The main purpose of these annual surveys is to provide in the shortest possible time reliable information relating to the chief characteristics of the diverse sectors that make up the industrial activity of the economy, not only with respect to the employment they generate but also to their operating, investment and production expenses.

The goal is, in this way, to satisfy national and international information requirements on this subject.

The designation change of these publications, initiated in 1993, came about through the commitment to adapt to the Regulation PRODCOM (PRODUccion COMunitaria - COMmunity Production) - relating to the harmonisation of the industrial production characteristics in European Union countries - and it fulfils Eurostat, the official European statistical organism, recommendations. The essential difference with respect to the previous *Industrial Survey* is that now the survey unit is the company for the *Industrial Survey of Companies* and the establishment for the *Industrial Survey of Products*.

7.2. Main characteristics of Andalusian industry according to branches of economic activity. 2005

SOURCE: IEA. Annual Industrial Survey of Companies. Data for Andalusia

*Thousands of euros.

Annual industrial survey of companies. Data for Andalusia. IEA. This is a statistical activity that adapts data from the Industrial Survey of Companies of the INE in greater detail for the Autonomous Community of Andalusia encompassing the companies main characteristics on employment, time worked, revenues and exploitation costs and other variables of interest, all classified according to activity branch.

The Autonomous Community of Andalusia breakdown strives to respect that of the INE, although it has not been entirely possible because for some of the 100 industrial sectors studied (maximum breakdown level) the sample used was not representative for Andalusia. For these reasons some of the sectors have been grouped together in the most consistent way possible.

7.3. Evolution of primary energy consumption by energy source in Andalusia. 1997-2005

Town planning, housing and construction

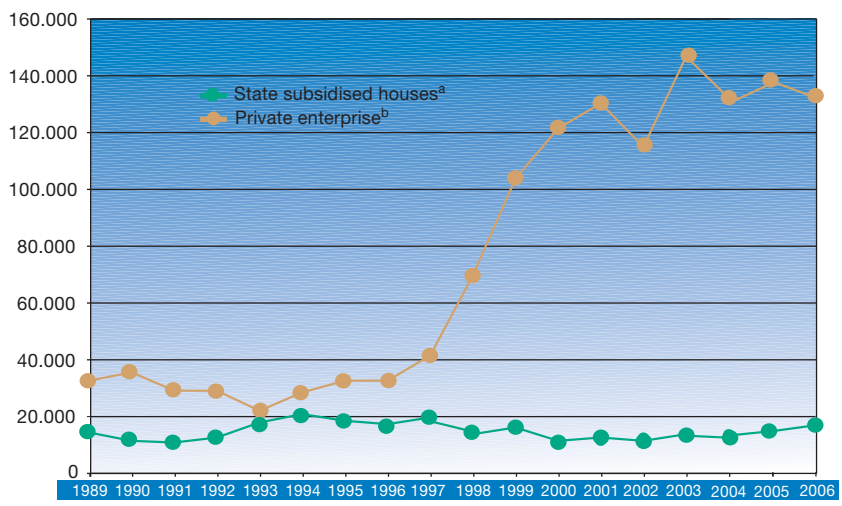

This chapter offers information on urban land distribution and the different types of housing, and construction sector activity, contributing data on properties and their cadastral value, types and legal basis of houses and the evolution of public expenses in construction and infrastructures.

8.1. Property and cadastral value by province. 2005

	Andalusia	Almería	Cádiz	Córdoba	Granada	Huelva	Jaén	Málaga	Sevilla	Spain
Property	5.113.761	434.382	648.954	495.055	667.530	345.044	451.616	1.092.258	978.922	30.532.795
Cadastral value (millions of euros)	181.139	14.961	23.102	13.905	19.244	10.077	11.381	48.300	40.168	1.193.263
Average cadastral value (euros)	35.422	34.442	35.599	28.087	28.828	29.206	25.202	44.221	41.033	39.081

SOURCE: Ministry of the Treasury. Cadastral Register. Basic Statistics by municipality

8.2. Evolution of houses under construction according to housing regime in Andalusia. 1987-2006

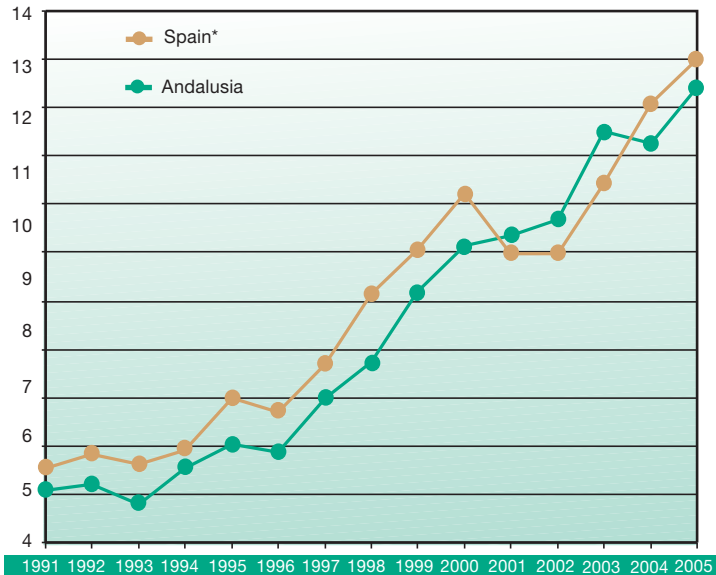

SOURCES: 1989-1993: Ministry of Public Works and Transport. Statistical Yearbook
 1994-2003: Regional Government Ministry of Public Works and Transport.

 2004-2006: Regional Government Ministry of Public Works and Transport.
 Ministry of Housing

^aIncludes provisional housing certificates and houses under construction.
^bEstimated data for 2006.

8.3. Evolution of new houses or renovation work provided for in municipal planning permissions.1991-2005

(houses/1.000 inhabitants)

SOURCE: Ministry of Development. Building Construction Statistics. Municipal planning permissions

*The data prior to 1998 do not include information on the Basque Country.

House building statistics. Ministry of Public Works This monthly statistics has been made since 1990 from the questionnaire the promoter or technician responsible for a project must submit to the Town Hall when soliciting the license for building work, demolition and renovation of buildings. It offers information mainly on the following variables: general features of the building work (location, legal basis, type of promoter, estimated duration); estimates of building materials; number and characteristics of

the buildings (purpose, surface area and volume, number of storeys, building type and facilities); number and characteristics of the houses (total living space, number of rooms –bathrooms- and type of finish). Data are broken down at Autonomous Community and provincial level; exploitation of municipal data (individualised for those of more than 10000 inhabitants and aggregates for those of a lesser size) are also elaborated.

8.4. Average price per square metre of market price housing according to age by province. 2006 (euros)

	Andalusia	Almería	Cádiz	Córdoba	Granada	Huelva	Jaén	Málaga	Sevilla	Spain
Up to two years	1.819,58	1.662,33	1.988,50	1.499,75	1.410,08	1.632,08	1.148,33	2.437,53	1.734,63	1.913,30
More than two years	1.552,45	1.413,95	1.604,35	1.352,03	1.314,85	1.559,90	967,15	2.058,88	1.550,90	1.955,60
Total	1.633,63	1.514,13	1.719,53	1.400,18	1.349,75	1.556,90	1.013,58	2.192,68	1.600,48	1.944,28

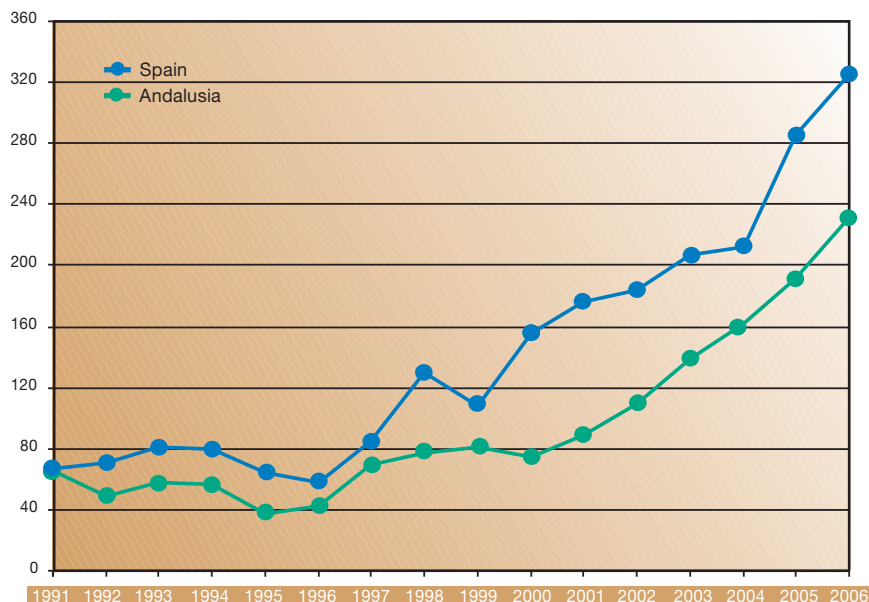

SOURCE: Ministry of Development. House Price Statistics. Base 2005

House Price Statistics. Ministry of Housing. The main object of these statistics is to estimate the house price of the real estate market (price per square meter) and to identify its quarterly and annual evolution, with the elaboration of index numbers. Housing under construction or with a purpose other than dwelling in the reference period (natural quarter) is excluded from the analysis. The geographical scope is the whole national territory, including the

cities of Ceuta and Melilla. The variables on which information for each appraisal is offered are: transaction type (protected housing and free market), valuation date, geographical codes, built surface, total square metres, valuation price and year of construction.

The Ministry of Public Works elaborated the data on house prices from 1987 to 2002.

8.5. Evolution of public spending on construction.1991-2006 (euros/inhabitant)

SOURCE: National Association of Construction Companies (SEOPAN)

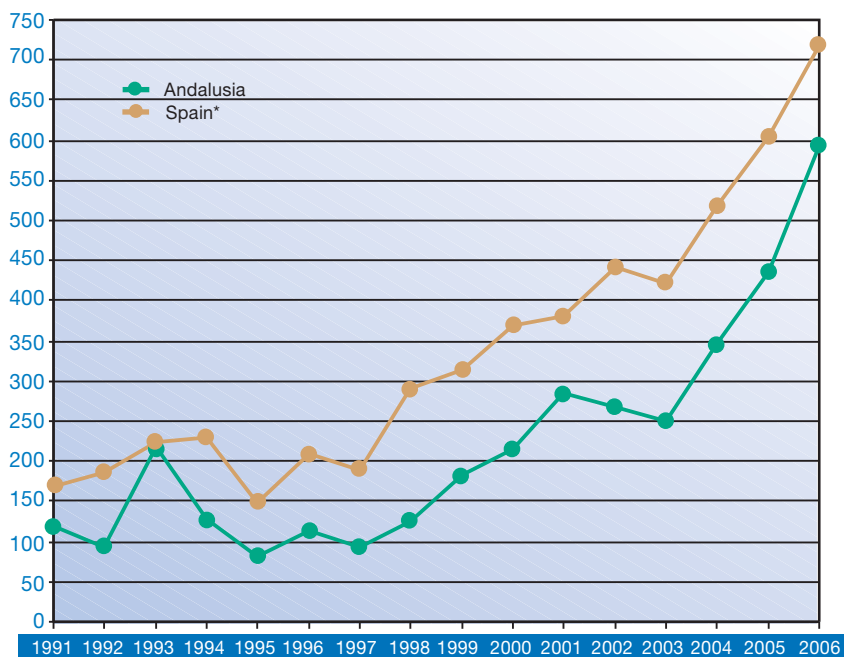

*Since 2001 the series on Spain takes in the demand for building work by public administrations that have been published in the Official Government Gazettes in the reference year. Until 2000 it only took in those demands whose tenders had been carried out in that year.

8.6. Evolution of public spending on construction and infrastructure according to type in Andalusia. 1998-2006 (thousands of euros)

Fatal casualties	587	81	69	64	74	54	42	97	106	3.377

SOURCE: Ministry of the Interior. Directorate General of Traffic

*The casualties count is made every 30 days

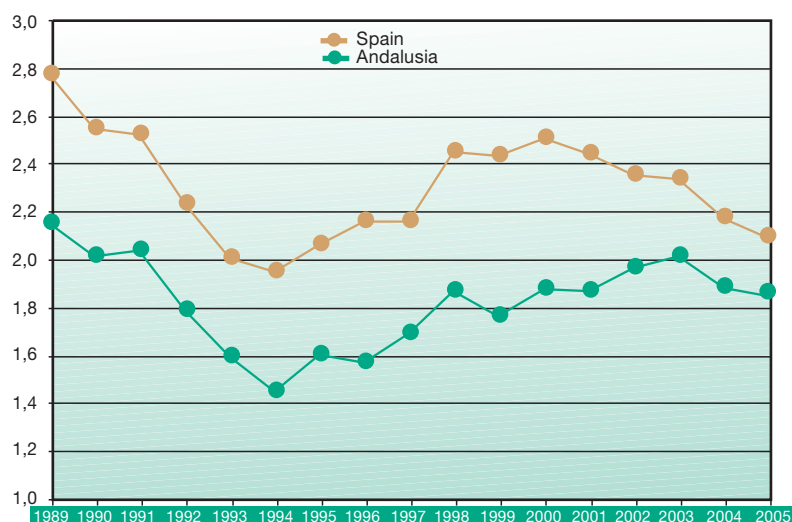

Accidents with casualties: it reflects the number of accidents that occur or originate in a public highway open to the traffic causing death or injuries to one or more people and, at least, one motor vehicle is involved.

Fatal casualty: a person deceased as a consequence of the accident. Death can occur during the accident or up 30 days after it.

General Statistical Yearbook. Road Accident Statistics Yearbook. Directorate General of Traffic. The *General Statistical Yearbook* offers a detailed analysis of the statistical data

relating to vehicle registration, vehicle fleet, driving licences and traffic offences. The *Road Accident Statistics Yearbook* presents statistical series on road traffic accidents and victims.

9.4. Evolution of the number of accidents with casualties. 1989-2005* (accidents with victims/1000 inhabitants)

SOURCE: Ministry of the Interior. Directorate General of Traffic

*As of 1993 the casualties count is made every 30 days.

9.5. Motor vehicle fleet by type and province. 2006

Prices, commerce and tourism

This chapter offers significant data to improve comprehension not only of the Andalusian commercial situation (commercial establishments, registrations in the IAE -economic activity tax-, import and export values, etc.) but also on the

tourism activity (number and origin of the tourists, hotel occupancy level, among others) and, at the same time, on an issue closely related to both activities: price variations.

10.1. Evolution of the variation rate* of the Retail Price Index (RPI). 2002-2006 (annual average)

SOURCE: INE. Retail Price Index (RPI). Base 2006

*Interannual variation rate calculated on average annual values of the general Retail Price Index (RPI).

Retail Price index (RPI). INE. It is a statistical measure of the evolution of the prices of goods and services consumed by householders in Spain. In the new 2006 base, innovations have been introduced in order to make its coverage more representative as well as enhancing accuracy of

this indicator's measurement of evolution. These variations are: augmentation of the municipality sample, increased number of prices collected, changes in the composition of the shopping basket and more up-to-date weightings.

10.2. Retail Price Index by large group. 2006

(data up to December)

	Andalusia		Spain

SOURCE: IEA. Directory of Establishments Engaged in Economic Activity in Andalusia

Employed persons in an establishment: average number of persons who, in the annual period of reference, have participated in the economic activity of the enterprise or establishment in return for remuneration in money, kind or profit-share. The activity does not necessarily have to be carried out on the premises.

Directory of establishments engaged in economic activity in Andalusia. IEA. It is aimed at the elaboration, management and upgrade of a directory of the existing centres of production of goods and services in the Autonomous Community of Andalusia, supplying knowledge on their basic structural data.

It is, therefore, a reference framework for taking censuses, elaborating surveys by sampling and statistical adjustment of data, whenever the units studied carry out an economic activity.

There is a constant upgrade performed from diverse sources such as administrative registers, surveys and sector files of different activities.

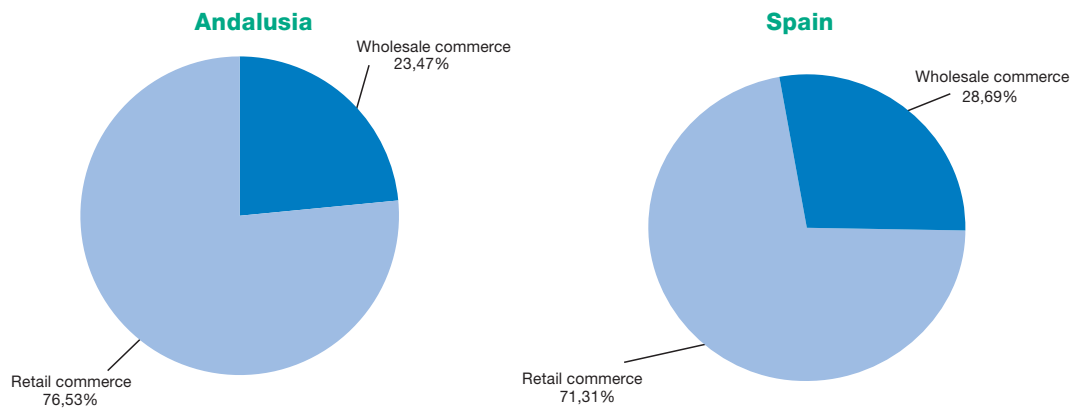

In the 2005 data a methodological change has been carried out including new activities:

- Those carried out in mobile units or without permanent facilities (street sellers, fairground stalls, etc.).
- Those carried out, although in a permanent way, in enclosures that are not buildings (outdoor activities, in ephemeral or provisional facilities).

- Those carried out in family houses without exterior signs and without easy public access or in which one or several rooms of the family house are not dedicated to.

10.4. Distribution of commerce. 2006*

(data up to 1st January) (percentage)

SOURCE: INE. Central Business Directory

*Sales of motor vehicles, motorbikes and mopeds have not been included.

Central Business Directory. INE. Updated on 1st of January 2006, it is an information source to analyse company registrations, cancellation and continuity, which is known as business demography.

It embodies structured information on magnetic storage media, with identification, location and classification data according to the number of people

employed and the economic activity carried out by the establishments, coming from registers and statistical files, rounded off with information from the INE. It is aimed mainly at setting up a framework to design sub-populations for survey elaboration and to provide a source to develop structural statistics on companies.

10.5. Number of registrations in economic activities tax according to section by province. 2005^a

^aPreliminary data.

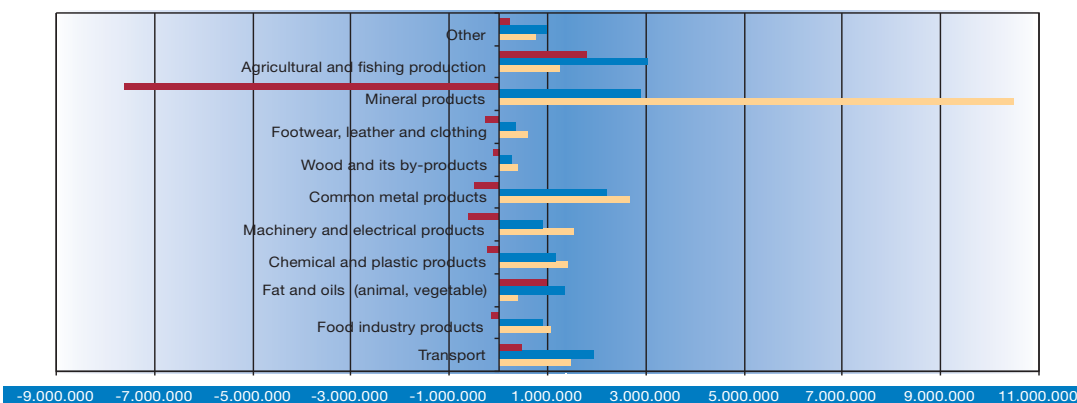

^bSingapore, Taiwan, Hong-Kong.

Statistics on exchange of goods between the member states of the European Union and extra community trade. Data for Andalusia. IEA. Since 1990 this activity has filled an important gap within the economic statistics elaborated currently in the Autonomous Community. It includes information on Andalusian imports/introductions and exports/goods consignments from data provided by the Department of Customs and Excise.

Extra and intra community trade of Andalusia refers exclusively to the commercial exchanges of goods or merchandise with other countries, as the non-existence of 'regional customs' and their register prevents us from knowing the commercial flow between the different Autonomous communities of Spain.

10.7. Andalusian imports and exports by large group. 2006*

10.9. Distribution of tourists in Andalusia by origin. 2006 (percentage)

SOURCE: IEA. Survey on the Tourism Situation of Andalusia

*Does not include Spain.

Survey on the Tourism Situation of Andalusia (STSA). IEA. Its goal is to face up to the needs and shortages of information in the tourism sector in Andalusia.

It is a continuous quarterly survey aimed at identifying the number, distribution and characteristics of the travellers that move around Andalusia for tourism, the amount and composition

of their spending in the region, as well as their motivation to travel in Andalusia and their estimation on the services received during their stay.

A new methodology is applied in this survey for the second quarter of 2006, which modifies features such as zoning, sample design or the estimation procedures used to calculate some of the main variables.

10.10. Tourist establishments by province. 2006^a

^aAll those establishments registered in the Andalusian Register of Tourism on the 31st December 2006 have been taken into account

^bHotels, hotel-apartments and boarding houses have been included.

Hotel Occupancy Survey. Data for Andalusia. (IEA). This is a monthly source to assess the tourism sector activity. The information is achieved by means of a survey in hotel establishments of the Autonomous Community of Andalusia. The same activity is carried out by the INE, but for the whole country.

The general aim of the hotel occupancy survey is to obtain monthly synthetic indexes that evaluate

the tourism sector activity, allowing short-term forecasts to be made. It offers information on hotels by category, province, zone and tourist area, and resident country of the travellers. The 2006 data are not comparable with those published in 2005, as a new estimate has been carried out on hotel establishments.

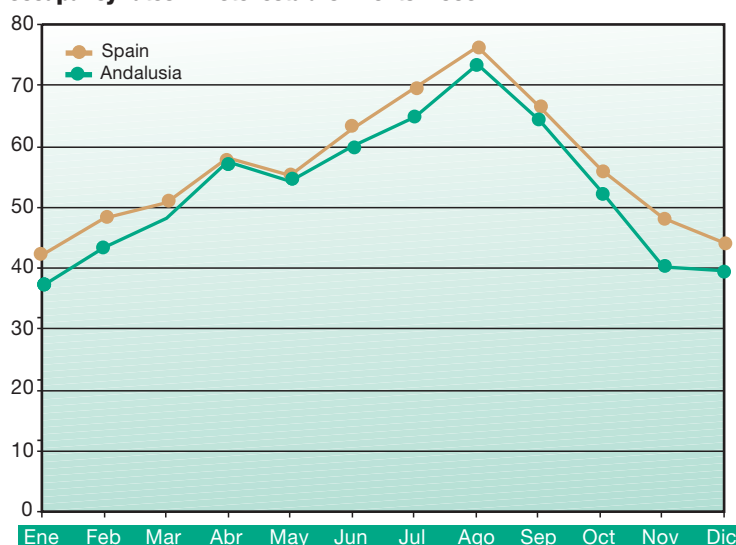

10.11. Guest flows in hotel establishments by province of accommodation. 2006*

SOURCE: INE. Mortgage Statistics. New base
*Preliminary data.

Mortgage Statistics (new base).

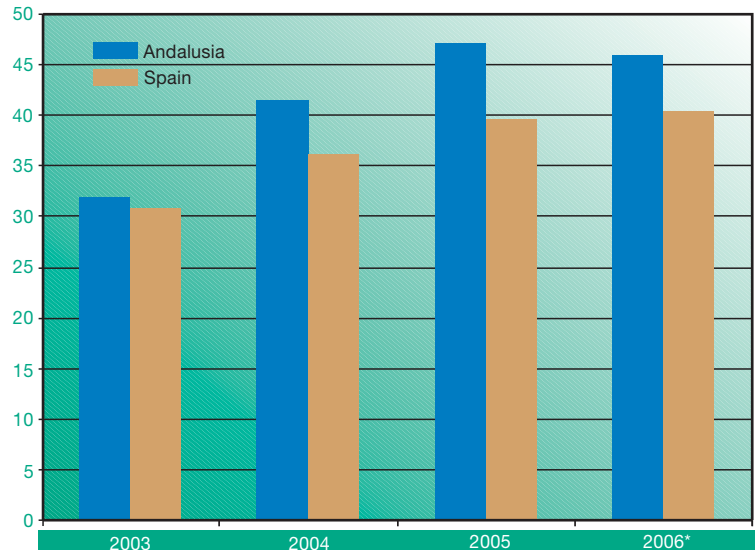

INE. This offers the number of new mortgages constituted during the reference month on properties registered in the Property Registers, and the value of the new mortgage credits for these mortgages. As of January 2004 the College of Registrars of Deeds of Spain supplies centralized information to the INE.

Data on rural and urban properties, classified by province and Autonomous Community are published, as well as, by the type of entity that grants the loan. From 2006 information on mortgage register changes and cancellations is disseminated.

The date of inscription in the registers is the reference date of mortgages.

11.4. Evolution of the number of urban property mortgages. 2003-2006

(number of mortgages/1000 inhabitants)

*Corresponds to 2003-2004. The figures represent average values.

Commercial Performance Information Bureau of Andalusia. IEA. Since 1990, Spanish companies compulsorily lodge their annual accounts in the Mercantile Registers of the province of their business address to make them public. This requirement was laid down by Law 19/1989 to adapt legislation to EU directives.

The data supplied by the companies that must compulsorily lodge their annual accounts in Mercantile

Registers have different statistical uses. On the one hand it serves as information base for the estimates of the macro-magnitudes of the Andalusian economy. On the other hand, it is used to upgrade the directory of establishments and companies and, also, to perform micro-economic or business studies.

11.11. Evolution of the number of debtors by insolvency proceeding type. 2005-2006

(proceedings/1000000 inhabitants)

SOURCE: INE. Insolvency Proceedings Statistics

Insolvency proceedings: bankruptcy proceedings can be initiated when the debtor is insolvent, that is, when the debtor is unable to pay his liabilities on a regular basis.

Voluntary insolvency proceedings: the petition is presented by the debtor in the two months following the date in which he/she would have or should have known his/her insolvency status.

Compulsory insolvency proceedings: the petition is submitted by any of the debtor's creditors. The origin, nature, amount, acquisition and maturity dates of the credit as well as the credit status at the time of filing the application must be specified.

Statistics on Insolvency Proceedings. INE. *Statistics on Receiverships and Declared Bankruptcies* needs to be substituted by a new statistics, the Statistics on Insolvency Proceedings as of September 1 2004, when the Organic Law 8/2003 for Insolvency Law Reform and Insolvency Law 22/2003 come into force, as the legal concept of receiverships and declared bankruptcies is replaced by "concurso de acreedores" ("creditors' meeting"), with the entities subjected to these procedures

being called "deudores concursados" ("debtors"). The statistics provides quarterly data on the number of debtors as well as the type of insolvency proceedings (voluntary or compulsory), the type of procedure (ordinary or abbreviated), existing advance arrangement proposals and their content (debt reduction, extension of time, debt reduction and extension of time or any other proposal).

It is essential to know income origin; as for expenses, even though a good classification by administrative organisms provide a satisfactory understanding of their structure, a functional classification reflects the expenses policy, that is to say, the aims or purposes to be achieved. The

Ministry of the Treasury and the Regional Government Ministry of the Treasury supply statistical information on Budgets at national and autonomous levels and the European Commission in the European Union scope.

Foster families: social protection measure put forward for minor in specific circumstances by which he/she is temporarily introduced into a family which is not made up by his natural parents. This situation will last until the minor can be reinstated in its origin family, or to be reinserted in his/her social environment when he/she is old enough to reach his/her own emancipation or until the minor can be adopted. The foster family may receive an economic compensation and there is not any familial parental bond.

Adoption: legal measure by which a minor is definitely introduced into a family which is not made up by his natural parents, with the same consideration, respect, rights and duties as the natural children. The adopting family takes on all the patria potestas duties, disappearing, except in extraordinary cases, all links between the minor and his natural parents

13.6. Financial assistance beneficiaries according to type by province. 2006

(data up to December)

SOURCE: Regional Government Ministry for Equality and Social Welfare

Beneficiaries of non-contributory retirement pensions: Persons of sixty-five and over without adequate resources are entitled to this type of pension, although they have never paid contributions or not sufficiently. They must have resided between the date of their 16th birthday and the date of claiming the pension in Spanish territory or in a European Union country for ten years of which two must have been consecutive and immediately prior to claiming the benefits.

Beneficiaries of non-contributory disability pensions: Persons entitled to this type of pension are those between eighteen and sixty five with a disability or chronic illness of 65% or over; people who want to obtain the economic complement of 50% for third person's help having a disability or chronic illness of 75% and over and exceed the established scale. They must reside in Spanish territory and must have been living in Spain or in a European Union country for five years of which two must have been consecutive and immediately prior to claiming the benefits.

Benefits from the Law of Social Integration of the Disabled (LISMI): these benefits are aimed at providing disabled people with the essential means for the exercise of their rights, and to guarantee the minimum economic, legal and social resources.

Benefits for illness/old age from the Social Protection Fund (F.A.S.): these benefits apply to people whose personal or family revenues are inadequate to cover their basic needs

14 Culture

This chapter offers data on features relating to culture, both on consumption such as visits to libraries, museums, and archaeological remains or monumental sites, and on supply, for instance, the

existing real estate of cultural interest in the Autonomous Community of Andalusia or the amount of material published.

14.1. Number of visitors^a to provincial and municipal public libraries in Andalusia. 2006

SOURCE: Regional Government Ministry of Culture

^aThe people who visit libraries to use any of their services or to participate in any of their activities (study their own books or notes, consult catalogues, borrow books, information, cultural activities, etc) are considered as visitors.

^bProvisional data. Almería, 100,00%; Cádiz, 92,85%; Córdoba, 94,55%; Granada, 74,28%; Huelva, 61,82%; Jaén, 80,62%; Málaga, 91,39%; Sevilla, 69,24%.

Library Statistics. INE. The main goals are: to provide information relating to the physical equipment and human resources of the libraries, to measure the variations in the activity of the libraries, to evaluate the funds designated for this activity and to facilitate international comparability. Results are obtained by type of library and autonomous community.

These statistics are made biennially and their scope extends to all the libraries in the Spanish territory, whatever their administrative dependency, except school and private ones not open to the

public. The information applies to the natural year, although some features refer to 31st of December of the year the study was conducted.

The INE has elaborated these statistics since 1960. However, they were reorganized in 1972 to adapt to UNESCO recommendations in the 1970 conference. Since 2002 some changes have been introduced, such as the new library definition based on ISO 2789, a new classification of the types of libraries and delves deeper into the implementation of the information and communication technologies in libraries.

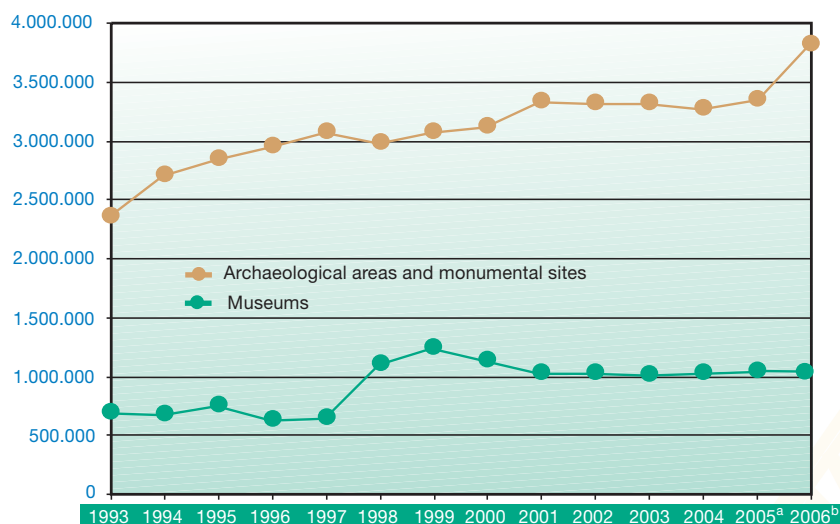

14.2. Real estate under protection order according to cultural interest by province. 2006

Machines type B: recreational machines that, in return for the price of the game, give the users a time to play and, eventually, a prize whose value cannot exceed twenty times the price of the game. This type of instrument must return at least 75% of the bets carried out.

Television Audience Yearbook. SOFRES, Media Audience. It provides data and expressive analysis on television audience tendencies. To this end it measures and monitors the television audience through the audiometers provided to a representative panel of homes.

The panel is made up of primary residences with television in the Peninsula, the Balearic and Canary Islands and all the individuals aged 4 and

over living there. The regional sample is not proportional because in some communities with autonomous television it has been oversized in order to guarantee satisfactory sample for studies that include percentage wise reduced variables. In 2005, there were 3.305 homes in the panel, at the moment the figure is in excess of 3.840 homes with audiometers.

Social participation and justice

This chapter offers data on different forms of participation such as: electoral participation, complaints to the Andalusian Ombudsman or citizens exercising their right to demonstrate.

Information relating to the Andalusian judicial activity that takes place in courts and the offences to be solved in them is provided.

16.1. Composition of the Andalusian Parliament

(14 de marzo de 2004)

SOURCE: Regional Government Ministry of the Interior

PSOE-A: Partido Socialista Obrero Español de Andalucía (Spanish Socialist Party of Andalusia)

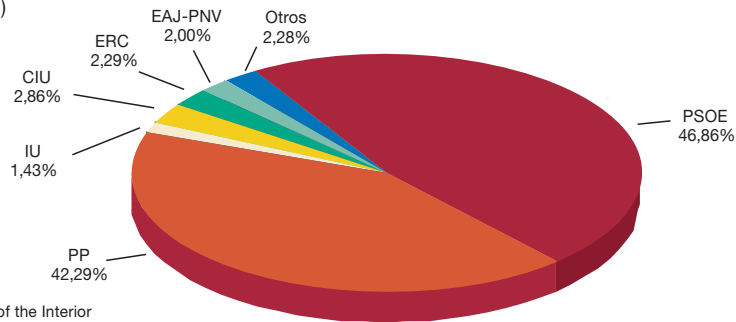

PP: Partido Popular (Popular Party)

IULV-CA: Izquierda Unida-Los verdes-Convocatoria por Andalucía (United Left Front-the Green Party of Andalusia)

PA: Partido Andalucista (Andalusian Party)

Voters in the Andalusian Parliamentary Elections: voters are all the Spanish persons who, having the right to vote, are in a municipal register of the Autonomous Community or, living abroad, had their last administrative residence in Andalusia.

16.2. Composition of the Congress of Deputies
(14th March 2004)

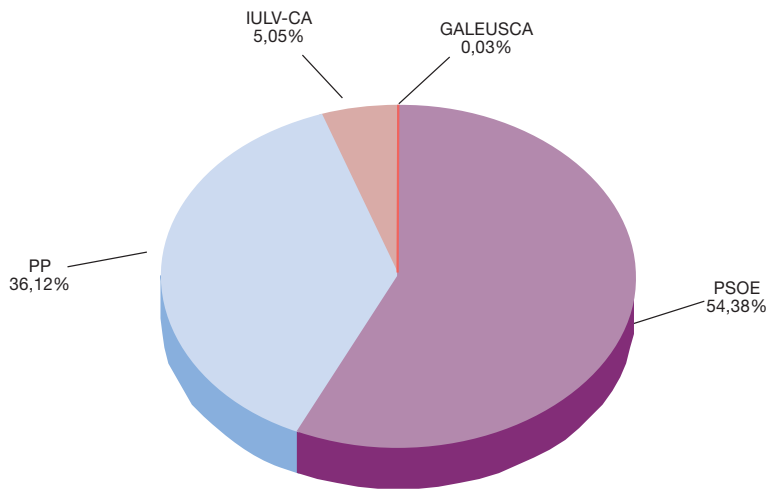

SOURCE: Ministry of the Interior

PSOE-A: Partido Socialista Obrero Español de Andalucía (Spanish Socialist Party of Andalusia)
 PP: Partido Popular (Popular Party)
 IU: Izquierda Unida (United Left Front)
 CIU: Convergència i Unió (Convergence and Union - Catalan National Party)
 ERC: Esquerra Republicana de Catalunya (Left wing Republican Party of Catalonia).
 EAJ-PNV: Eusko Alderdi Jeltzalea-Partido Nacionalista Vasco (Basque National Party).

General Election Voters: are all the Spanish persons over 18, in full use of their civil and political rights, resident in Spain or abroad.

16.3. Results in Andalusia of the elections to the European Parliament held on 13th June 2004^{ab}

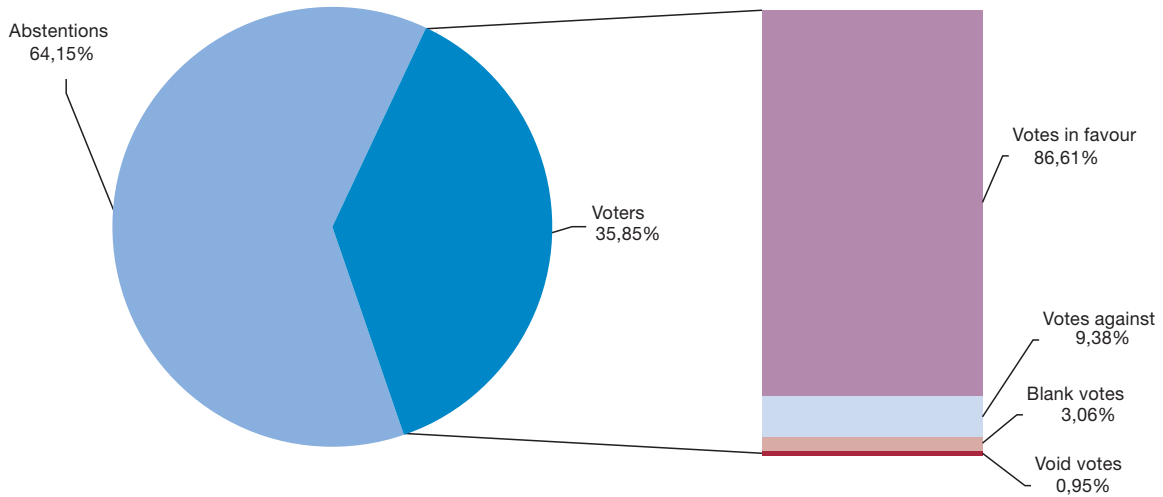

SOURCE: Ministry of the Interior

^aOnly the candidates who obtained representation have been included
^bCalculated on valid votes

PSOE: Partido Socialista Obrero Español (Spanish Socialist Party)
 PP: Partido Popular (Popular Party)
 IULV-CA: Izquierda Unida-Los Verdes-Convocatoria por Andalucía (United Left Front-the Green Party of Andalusia)
 GALEUSCA: Galeusca-Pueblos de Europa (Galeusca-People's Europe Party)

European Parliamentary Elections voters: are all the Spanish General Election voters and foreign nationals belonging to member countries of the European Union that, living in Spain, choose to vote in their place of residence.

16.4. Participation in the Referendum to Reform the Statute of Autonomy of Andalusia held on 18 February 2007 (percentage)

Judicial statistics. INE. Judicial statistics have been published every year since 1959 and supply data, broken down by province, on the activity of the courts of the different judicial fields, common, civil, contentious-administrative and juvenile courts. It has been carried out since 1995 in collaboration with the General Council of the Judicial Power. The

information extends to diverse variables: cases registered and solved, sentences, type of offence, sentence imposed, people involved, etc.

The information is gathered in bulletins submitted on a quarterly basis by the judicial bodies except the Magistrates Court which does it six monthly.

The great numbers of the Andalusian economy

This chapter refers to the evolution of the great regional numbers (economic macro-magnitudes): the gross domestic product, the gross value added, the remuneration of wage-earners and gross operating surplus/mixed income, coming from the annual and Quarterly Regional Accounting of Andalusia and from the Regional Accounting of

Spain. It also gathers data on provincial distribution of the gross value added.

Likewise, the macroeconomic picture of Andalusia for 2005 is included, presenting the different components of the gross domestic product at market prices based on demand, supply and income generation.

17.1. Evolution of the main macro-magnitudes. 1999-2005

(millions of euros)

(percentage)

SOURCE: INE. Regional Accounts of Spain. Base 2000. Series 2000-2006

*Preliminary estimate.

Regional accounting of Spain. Base 2000. Series 2000-2006. INE. This is a set of operations, charts and tables aimed at giving a systematic and comparable overview of the economic activity of the Spanish regions. The INE has elaborated the

Regional Accounting since 1980, experiencing in this period several base changes. This publication is integrated in the European System of Accounts (ESA) and uses the definitions and standards established by this system.

Annual regional accounting of Andalusia. Base 2000. Series 1995-2005. IEA. From the new structures provided by the input-output framework 2000 (MIOAN-00), continuity is provided to the System of Economic Accounts of Andalusia.

Different conceptual and statistical changes regarding the information published in the previous base accountant corresponding to 1995 have been incorporated. The different modifications are aimed

at improving reliability and precision of the estimates and not only affect the processes of obtaining annual aggregates but also the use of new statistical sources.

In turn, EUROSTAT recommendations on the necessity of carrying out a base change in the accounting estimates every five years are fulfilled.

This activity follows the new European System of National and Regional Accounting (ESA 1995) methodology, in force in the European Union.

17.3. Andalusian macro-economic table. 2005^a
